Dear Ms Woodward,

RE: Interim Site Audit Advice – Site Auditor Endorsement of Detailed Site Investigation, Burwood Station, Sydney Metro West.

Introduction

James Davis of Enviroview Pty Ltd has been engaged by Acciona Construction Pty Ltd and Ferrovial Construction Pty Ltd (the 'AFJV') to provide the services of a NSW EPA Contaminated Land Accredited Site Auditor, to conduct a Site Audit in accordance with the *Contaminated Land Management Act 1997* and relevant guidelines made or approved under s.105 of that Act in relation to the Site identified as Burwood Station, Sydney Metro West Central Tunnelling Package (the 'Site'[1]).

The objective of the Site Audit, depending on the outcome of the site investigation is to provide a Site Audit Report and Site Audit Statement to certify, in relation to contaminated land, the Site Auditor's opinion of whether the Site is suitable for the proposed use or the Site can be made suitable with the implementation of a Remedial Action Plan.

The requirement for the Site Audit is to meet specific conditions of the Conditions of the State Significant Infrastructure approval (SSI 10038) and clauses of an agreement made between the NSW Government and the AFJV (the *Deed Agreement*).

A Site Audit Interim Advice is issued by a Site Auditor following the review of reports and to assist in the management of contamination issues at a Site regarding requirements of the Site Audit at a particular stage of the Site Audit prior to the Site Audit being concluded. An interim advice does not constitute a Site Audit Statement or a Site Audit Report and does not pre-empt the final Site Audit conclusions. A Site Audit Report and Site Audit Statement will be prepared at the conclusion of the Site Audit.

[1] *The specific area of the Site is as defined as the 'Study Area' notated in figure F1 of the Detailed Site Investigation Report (ERM, 17 August 2022).*

The purpose of this interim advice is to provide an endorsement of the Detailed Site Investigation by the Site Auditor as required by the *Deed Agreement* (clause 12.19).

Detailed Site Investigation Review

The Detailed Site Investigation that was recently undertaken at the Site is reported in the following report:

> Environmental Resources Management Australia Pty Ltd (ERM). *Detailed Site Investigation, Burwood Construction Site, Sydney Metro West; Central Tunnelling Package.* Report Reference: SMWSTCTP-AFJ-BWT-EN-RPT-000002 Revision 03 dated 16 August 2022. (the *Detailed Site Investigation Report*)

Prior to the completion of this report, the Site Auditor was provided the opportunity to review and provide comments on previous revisions of the report[2].

In support of the review of the *Detailed Site Investigation Report*, the Auditor has also considered information presented in the following document:

> ERM. *Sampling and Analysis Quality Plan, Burwood Station Construction Site, Sydney Metro West: Central Tunnelling Package.* Report Reference: 0577577 Final, dated 18 January 2022. (the *Sampling, Analysis and Quality Plan*)

The detailed site investigation work was undertaken in general accordance with the *Sampling, Analysis and Quality Plan* that was prepared with Site Auditor consultation.

The *Detailed Site Investigation Report* was found to be satisfactory in relation to the requirements of the NSW EPA *Guidelines for Consultants Reporting on Contaminated Land* (NSW EPA 2020).

The investigation identified the presence of bonded asbestos within fill at the site and the concentration of some heavy metals exceeded the relevant ecological investigation levels applicable to the proposed use.

The *Detailed Site Investigation Report* concluded that the human health and ecological risks from the presence of the identified contamination in areas of the site described as the 'Construction Area' would need to be managed through the preparation of a Remedial Action Plan[3] to render those parts of the site suitable for the proposed land use. The rest of the site, including the Station Box, which will be subject to extensive excavation, remediation is not required to render the site suitable, however, the excavation of spoil in this area will be undertaken to the requirements of a 'contaminated spoil management plan' to be consistent with the requirements of the project approvals and the project Construction Environmental Management Plan.

---

[2] *Interim Audit Advice 0301-2119_03 and Interim Audit Advice 0301-2119_04.*

[3] *Both the terms Remediation Action Plan and Remedial Action Plan are used interchangeably by consultants within the NSW contaminated land industry – the preferred term is Remedial Action Plan as this is the term used in the current NSW EPA Guidelines for Consultants Reporting on Contaminated Sites.*

Site Auditor Endorsement of the Detailed Site Investigation

Based on the review of site investigation works, the *Detailed Site Investigation Report* is endorsed by the Site Auditor.

The recommendations for the development of a Remedial Action Plan to detail the works required to manage the identified soil contamination in the portion of the site identified as the construction area to render the site suitable for the proposed use, is agreed with.

If the Remedial Action Plan will involve the implementation of an Environmental Management Plan, for instance if in-situ containment is used to remediate the site requiring ongoing management, not only does this need to be practicable, the requirements of the EPA guidelines for there to be public notification and that it can reasonably be made to be legally enforceable will also need to be satisfied.

The management of spoil excavated from the station box, by a 'contaminated spoil management plan' is deemed acceptable on the basis that remediation in this area is not required to make the site suitable for the proposed use. However, some of the spoil from this area will have some level of contamination, albeit below that which would require remediation if it remained on site, and as such does require management during excavation regarding the placement, storage, reuse and/or disposal. The preparation of the site-specific contaminated spoil management plan must ensure that the spoil is managed in accordance with plans approved under the project approval and requirements of NSW legislation relating to waste.

Closing

Thank you for your time regarding this matter. If you require additional information or clarification, please do not hesitate to contact me.

Yours sincerely

James Davis
NSW EPA Contaminated Land Site Auditor

EXECUTIVE SUMMARY

Environmental Resources Management Australia Pty Ltd (ERM) was engaged by Acciona Construction Pty Ltd and Ferrovial Construction Pty Ltd (together "AFJV") to complete a Detailed Site Investigation (DSI) at the Burwood Construction Site (the Site). The Burwood Site forms part of the Central Tunnelling Package for the Sydney Metro West extension and is located at the junction of Parramatta Road and Burwood Road, to the north of Parramatta Road and east of Burwood Road, Concord, NSW.

This report focusses on the characterisation of the Site and the identification of contamination that could result in unacceptable exposure to ecological or human receptors that would require remediation to enable the Site to be made suitable for the current and proposed future use.

A total of 39 soil investigation locations were completed across the Site during this DSI; fourteen locations were completed inside the Station Box Area and 25 locations were completed outside the Station Box Area. Groundwater samples were also collected from two monitoring wells on the Site (one existing well and one new well).

Based on the intrusive investigation works completed at the Site and resultant analytical data, the following conclusions have been made relating to soil at the Site:

- The soil data set is considered to provide an appropriate level of site characterisation in accordance with the requirements of guidance made or approved under s105 of the Contaminated Land Management Act 1997.
- Fill materials on the Site were found to contain sandstone, concrete, brick, plastic. Asbestos containing material (ACM) fragments were found in two locations. Natural soils below the fill consist of silty clays and clays, with shale underlying the clays.
- Soil samples exceeded human health criteria and ecological screening criteria for lead in one location (BUR_BH115_0.5). However, the 95% Upper Confidence Limit (UCL) was below criteria for lead. Additionally, three primary samples exceeded the adopted EIL for copper and three primary samples exceeded the EIL criteria for zinc. Calculation of the 95% UCL for these results indicated all were compliant with the adopted EIL criteria.
- Polycyclic Aromatic Hydrocarbons (PAHs) were detected at numerous locations within fill materials across the Site. Carcinogenic PAHs as benzo(a)pyrene Toxic Equivalent Quotient (TEQ) were below the human health screening criteria.
- Polychlorinated Biphenyls (PCBs), pesticides, and Per-and Polyfluoroalkyl Substances (PFAS) concentrations in soil were below the adopted screening criteria.
- Bonded asbestos fragments were identified in two sample locations (BUR_BH116_0.2 ACM and BUR_BH123_0.3) within fill materials, however each detection was subsequently delineated in the north, south, east and westerly directions and both areas were considered to be hotspots.
- No significantly odorous soil was encountered, and odours are not considered likely to present a risk to the construction site. Photoionisation Detector (PID) screening results were below 50ppm.
- Volatile organic compounds (VOCs), Semi Volatile Organic Compounds (SVOCs) and Total Recoverable Hydrocarbons (TRH) did not exceed any of the human health or ecological screening criteria adopted.

The conclusions relevant to groundwater at the Site are as follows:

- The groundwater data is considered to provide adequate characterisation in accordance with the requirements of guidance made or approved under s105 of the Contaminated Land Management Act 1997.

- Concentrations of metals (one or more of arsenic, cadmium, copper, nickel and zinc) and total phosphorus and nitrogen in groundwater exceeded the adopted screening criteria in both groundwater wells sampled.
- There were no other exceedances of the adopted ecological or health screening criteria.
- A trace detection of 6:2 Fluorotelomer Sulfonate was reported in one groundwater sample (BUR_MW108) however there were no exceedances of the adopted ecological or health screening criteria reported.
- Dewatering of the Station Box is likely to result in groundwater flow changing from the inferred current flow towards the Parramatta River to a flow pattern where some of the groundwater below the Site flows towards the Station Box. This is not considered likely to result in any significant change to the overall quality of groundwater beneath the Site, or to the risk profile.

In summary the potentially viable Source-Pathway-Receptor (SPR) linkages that require remediation action (further assessment, remediation or management) comprise:

- Potential risks to Sydney Metro and future development construction and intrusive maintenance workforces and general public/ passers by via inhalation of dust (potentially including asbestos fibres).

Fill material within the identified asbestos hotspot areas could be remediated and disposed off-site and a Remediation Action Plan (RAP) would need to be developed. Considerations will need to be made for the sustainability of future actions during remediation planning.

ERM considers that the level of site characterisation achieved by this DSI is sufficient to provide a basis for a RAP, which should be developed to target asbestos detected in fill at BUR_BH116 and BUR_BH123. Given asbestos has not been detected in boreholes (or three test pits) across the remainder of the Site, implementing the processes in the Construction & Environmental Management Plan (CEMP) during the construction phase of works would be prudent in order to mitigate potential risks associated with unexpected finds of asbestos.

While a RAP is not required for the remainder of the Site to meet CoA D72 within the Conditions of Approval for Sydney Metro West – Concept and Stage 1 Construction (SSI 10038), soil and groundwater within the Station Box must be documented as required by the Sydney Metro West Central Tunnelling Works Design and Construction Deed (“the Deed”); this will be accomplished via a Contaminated Soil Management Plan (CSMP) for the Station Box.

The Burwood North Construction Site RAP is being prepared for the remainder of the Site for the purposes of rendering the Site suitable for use in accordance with the requirements of the Contaminated Land Management Act 1997, guidelines prepared under the Act and the ASC NEPM 1999 (NEPC 2013). Considerations will need to be made for the sustainability of future actions during remediation planning.

ERM considers that the applicable requirements of the Deed and the project CoA have been complied with.

1. INTRODUCTION

1.1 General

Environmental Resources Management Australia Pty Ltd (ERM) was engaged by Acciona Construction Pty Ltd and Ferrovial Construction Pty Ltd (together "AFJV") to complete a Detailed Site Investigation (DSI) at the Burwood Construction Site (the Site). The Burwood Site forms part of the Central Tunnelling Package for the Sydney Metro West extension and is located at the junction of Parramatta Road and Burwood Road, to the north of Parramatta Road and east of Burwood Road, Concord, NSW (refer to Figure 1 for site location).

The Site comprises land that will form the Burwood Metro station, as well as land used for construction support. The Metro station construction on the Site includes creation of a Station Box excavation and access shaft (both excavated from surface) tunnel sections entering and leaving the Station Box (bored tunnel) and a pedestrian tunnel beneath Parramatta Road. ERM understands the site areas that will not be developed for the Sydney Metro Station will be used for commercial/industrial activities.

The DSI involved soil and groundwater sampling completed by ERM between December 2021 and January 2022. Results of this investigation were reported in draft format for review by key stakeholders in February 2022. Based on results of this investigation, in particular asbestos detections, further soil investigation was undertaken by the ADE Group between 24 March and 6 May 2022. Outcomes of ERM's DSI and an additional asbestos delineation completed as part of ADE's Site Characterisation Assessment (SCA) are reported herein.

1.2 Objectives

The objectives of the DSI were to:

- obtain sufficient information to enable the proposed excavation to be conducted with appropriate in-situ waste classification of materials required to be excavated and removed from the Site, it is noted that waste classifications for the excavation of materials has not been provided within the body of the DSI and will form part of the Waste Classification Report, to be prepared by others;
- obtain enough environmental data to provide a characterisation of the Site in accordance with the applicable NSW and Australian guidance;
- comply with the Conditions of Approval for Sydney Metro West – Concept and Stage 1 Construction (SSI 10038) ("the CoA"), specifically Condition D71 which reads:

  Before commencement of any construction that would result in the disturbance of moderate to high risk contaminated sites as identified in the documents identified in ***Condition A1*** *of this schedule,* ***Detailed Site Investigations*** *(for contamination) must be conducted to determine the full nature and extent of the contamination. The* ***Detailed Site Investigation Report(s)*** *and the subsequent report(s), must be prepared, or reviewed and approved, by consultants certified under either the Environment Institute of Australia and New Zealand's Certified Environmental Practitioner (Site Contamination) scheme (CEnvP(SC)) or the Soil Science Australia Certified Professional Soil Scientist Contaminated Site Assessment and Management (CPSS CSAM) scheme. The* ***Detailed Site Investigations*** *must be undertaken in accordance with guidelines made or approved under Section 105 of Contaminated Land Management Act 1997 (NSW). The* ***Detailed Site Investigation*** *for Sydney Olympic Park metro construction site must be prepared in consultation with SOPA;* and
- comply with the requirements of the Sydney Metro West Central Tunnelling Works Design and Construction Deed ("the Deed") contract no. 00013/13033 between Sydney Metro and AFJV. The requirements of the Deed are provided in Section 1.3 below.

This report focusses on the characterisation of the Site and the identification of any contamination that could result in unacceptable exposure to ecological or human receptors that would require remediation to enable the Site to be suitable for the current and future use.

An in-situ waste classification report has been prepared separately to classify material that will be excavated from the Station Box and taken off-site for re-use or disposal. This has been included as Appendix J of this DSI .

1.3 Requirements of the Deed

With respect to the provision of DSIs, the Deed requires (clause 12.19):

(a) *Except for Preliminary Works, the Tunnelling Contractor must perform and submit to the Principal's Representative and the Independent Certifier a Detailed Site Investigation prior to commencing any excavation activities:*

(i) *at any Area of Contamination Concern; and*

(ii) *to the extent otherwise required under the Planning Approvals.*

(b) *Notwithstanding clause 12.19(a), the Tunnelling Contractor may also perform additional Detailed Site Investigations carried out in other areas of the Construction Site or outside the Construction Site if the Tunnelling Contractor deems it necessary to manage the risks associated with contaminated land and to appropriately plan for Remediation. Any additional Detailed Site Investigation performed in accordance with this clause 12.19(b) must also be submitted to the Principal's Representative and the Independent Certifier.*

(c) *Each Detailed Site Investigation:*

(i) *must*

(A) *investigate areas of proposed excavation or disturbance;*

(B) *investigate land within the Construction Site or Extra Land surroundingthe areas of proposed excavation or disturbance with respect to the potential migration of Contamination via groundwater, ground gas, vapour and odour into the areas of excavation or disturbance; and*

(C) *characterise risks to the construction, operation and maintenance of Sydney Metro West and its infrastructure from Contamination,*

(ii) *be prepared in accordance with Law, Good Industry Practice, the Planning Approvals, all guidelines made or approved by the EPA and any other requirements of this deed;*

(iii) *be reviewed and approved by a Certified Contaminated Land Consultant; and*

(iv) *characterise the risk of Contamination migrating from the Construction Site as a result of the Tunneling Contractor's Activities;*

(d) *In addition to the requirements set out in clause 12.19(c), each Detailed Site Investigation performed within an Area of Contamination Concern must:*

(i) *To be reviewed and endorsed by an Accredited Site Auditor; and*

(ii) *Be accompanied by an Interim Site Audit Advice prepared by the Accredited Site Auditor when submitted to the Principal's Representative and the Independent Certifier in accordance with clause 12.19(a).*

(e) *In addition to the requirements set out in clauses 12.19(c) and 12.19(d), each Detailed Site Investigation performed within a Key Contaminated Area must in accordance with the relevant EPA guidelines:*

(i) *determine and delineate the lateral and vertical extent of Contamination within each Key Contaminated Area;*

(ii) *include in-situ classification of Solid Waste at sampling densities not less than that specified within the NEPM (2013) and the Industrial Waste Resources Guidelines (7), Sampling and Analysis: Soil Sampling (EPA Victoria 2010), except for Virgin Excavated Natural Material (VENM) and Excavated Natural Material (ENM) which are to be classified in accordance with the requirements of the Protection of the Environment Operations Act 1997 (NSW);*

(iii) *classify the Solid Waste in accordance with the Waste Classification Guidelinesusing a statistical approach where relevant;*

(iv) *be suitably detailed so as to inform the development of the Remediation Action Plan, any Remediation Cost Estimate and any Agreed Remediation Scope and to characterise contamination risk to the construction, operation and maintenance of Sydney Metro West (including but not limited to soil, groundwater, ground gas, vapour and odour risks arising from Contamination within the area of proposed excavation or disturbance or migrating into the area of proposed excavation or disturbance);*

It is noted that Contamination is defined in the Deed as: The presence in, on or under land or water or any other aspect of the Environment of:

a) a substance (whether occurring naturally or otherwise) which is at a concentration above at which the substance is normally present in, on or under land or water or any other aspect of the Environment in the same locality, being a presence that presents a risk of harm to human health or any aspect of the environment; or

b) any natural or artificial substance whether solid, liquid or gas (alone or in combination with any other substance) which is toxic, flammable or otherwise capable of causing harm to humans or the environment,

but excluding any Hazardous Material.

ERM notes that this definition of contamination differs from the definition within the Contaminated Land Management Act 1997 (CLM Act).

1.4 Scope of Works

The scope of works undertaken in order to meet the objectives included the following tasks:

- Project preliminaries including preparation of a site-specific Health and Safety Plan (HASP) and completion of subsurface utility clearance requirements;
- Review of background information relating to the Site, including:
  - Previous investigations relating to contamination;

  - The NSW Environment Protection Authority (EPA) Contaminated Land Register;
  - The NSW EPA Record of notices;
  - Historical aerial photographs and land uses;
  - Groundwater bore information;
  - Relevant government and other publically available databases;
  - Published soil, geology and topographic maps;
- ERMs intrusive works included:
  - Excavation and collection of samples from 13 borehole locations outside the Station Box Area and 12 locations inside the Station Box Area;
  - Installation of 1 groundwater well and monitoring at three existing groundwater wells;
- ADE's intrusive works, involving excavation and collection of samples from 11 borehole locations (10 outside and one within the Station Box Area), and three test-pits outside the Station Box Area;
- Laboratory analysis of soil and water samples for relevant contaminants of potential concern (COPC); and
- Preparation of a report summarising the information available from previous investigations, results of ERM's intrusive investigation, and asbestos results from ADE's intrusive investigation.

This report has been prepared in general accordance with the applicable guidelines made or approved under S. 105 of the *Contaminated Land Management Act* (1997), including (but not limited to) relevant sections of the National Environment Protection (Assessment of Site Contamination) Measure 1999 (ASC NEPM) (NEPC, 2013) and the Contaminated Land Guidelines: Consultants reporting on contaminated land (NSW EPA, 2020).

2. SITE SETTING

2.1 Site Description and Identification

The Site is located at the intersection of Parramatta Road and Burwood Road. The majority of the Site lies on the North East corner of this intersection and covers multiple residential and commercial properties. Additionally there is a small section of the Site that is located on the South East side of this intersection that covers 6 properties. Site identification details are summarised in Table 2-1. **Figure 1** at the rear of the report presents the Site Location and Layout.

Table 2-1: Site Identification

ITEM	DESCRIPTION
Site Name	Burwood Construction Site
Site Address	Corner of Parramatta and Burwood Road, Burwood & Concord, NSW
Property Identification	■ Lot 21 DP10928 ■ Lot 19 DP10928 ■ Lot C DP340812 ■ Lot 4 DP333924 ■ Lot 23 DP10928 ■ Lot 24 DP10928 ■ Lot 28 DP10928 ■ Lot 20 DP10928 ■ Lot 15 DP10928 ■ Lot 22 DP10928 ■ Lot B DP344400 ■ Lot 27 DP10928 ■ Lot 25 DP10928 ■ Lot 26 DP10928 ■ Lot 1 DP1027871 ■ Lot 2 SP73535 ■ Lot 100 DP1154740 ■ Lot 1 DP334189 ■ Lot 1 DP329105 ■ Lot 17 DP1217020 ■ Lot 19 DP1217020 ■ Lot 18 DP1217020 ■ Lot 14 DP1217020 ■ Lot 15 DP1217020 ■ Lot 16 DP1217020 ■ Lot 1 DP839095 ■ Lot A DP340812 ■ Lot B DP340812
Site Area	■ Northern portion - 12,900m^2 ■ Southern Portion – 1,400m^2 ■ Total Approximate Site Area – 14,300m^2 (1.4 Ha)
Local Government Area	■ City of Canada Bay Council (north of Parramatta Road) ■ Burwood Council (south of Parramatta Road)
Environmental Plan	Canada Bay Local Environmental Plan 2013 Burwood Local Environmental Plan 2012
Current Land Use	Residential properties with mixed business and commercial properties along Parramatta Road

The Site is an irregular shape and is divided into two portions. A larger portion on the north side of Parramatta road, and a smaller rectangular portion on the south side of Parramatta Road. Within these portions the Site is split into two sections. The broader Site area will be used as a construction support zone during the station construction and the Station Box Area/ Station Access Excavation Area where spoil will be excavated for the construction of the Burwood Metro Station and the access point south of Parramatta Road.

2.2 Environmental Setting

The following subsections provide a brief overview of the environmental conditions surrounding and underlying the Site derived from previous investigations and review of available mapping.

2.2.1 Surrounding Land Use

The Site is located in an area primarily used for commercial/industrial land uses along Parramatta road with general residential housing located in the northern portion of the Site.

Based on a desktop review of aerial photographs, previous reports and publically available information, the surrounding land uses to the Site include the following:

- North –Medium density residential housing with a Service station located approximately 30m North West of the Site, with residential housing and sports playing fields further north;
- East – Concord Oval with residential and mixed commercial businesses beyond;
- South – Mixed use following Burwood road, with low density residential properties; and
- West – mixed business and medium density residential housing, with an aged care centre and school beyond.

2.2.2 Topography and Hydrology

The previous investigation of the Site by Jacobs (2020) indicated that the Site has an easterly decline. ERM observed that the Site gently sloped towards the South East. The northern portion of the Site lies at an elevation of approximately 20 m Australian Height Datum (AHD) falling to the south east of the Site with an elevation of approximately 9 m AHD. Based on visual observations of the surface, this appeared to follow the natural landform with no significant filling associated with previous land use expected to be present across the Site. The majority of the Site is overlain with concrete with the exception of the front and rear gardens of the residential properties and garden beds within the commercial properties.

Surface water is expected to move across the Site until it enters pit and pipe drainage infrastructure and discharges into the Parramatta River which lies approximately 1.2 km to the north east of the Site.

2.2.3 Geology and Soils

A review of the Geological Survey of NSW 1:100 000 geological map indicates that the geology underlying the Site consists of Wianamatta Group Ashfield Shales, which are described as consisting of black to dark-grey shale and laminite.

A review of the NSW DPIE eSPADE tool (eSPADE v2.1 (nsw.gov.au)) indicated that the Site is underlain by the Blacktown (bt) residual soil landscape. The Blacktown landscape consists of gently undulating rises on Wianamatta Group shales. Local relief to 30 m, slopes are usually <5%. Broad rounded crests and ridges with gently inclined slopes. Cleared eucalypt woodland and tall open-forest (wet sclerophyll forests). Soils consist of shallow to moderately deep (<100 cm) Red and Brown Podzolic Soils (Dr3.21, Dr3.11, Db2.11) on crests, upper slopes and well-drained areas; deep (150 - 300 cm) Yellow Podzolic Soils and Soloths (Dy2.11, Dy3.11) on lower slopes and in areas of poor drainage.

The Environmental Impact Statement (EIS) (Jacobs, 2020) completed a review of Potential Acid Sulfate Soil (P)ASS risk maps from the former Office of Environment and Heritage (now part of Department of Planning & Environment (DPE)) and found the Site to lie in an area described as "No Risk" in terms of P/ASS. Furthermore, the Burwood Local Environment Plan (LEP) (2012) Acid Sulfate Soils Map indicates that the Site lies within a Class 5 area. Class 5 areas are characterised by being the lowest likelihood of encountering Acid Sulfate Soils (ASS). Visual and olfactory observations of soils during intrusive investigation works did not indicate signs of P/ASS.

2.2.4 Hydrogeology

A search undertaken by LotSearch Pty Ltd indicated that there were no registered groundwater bores located onsite and seven registered groundwater bores identified within a 500 m radius of the Site. These bores were noted to be a mixture of private and other Govt. bores.

No information was available relating to the standing water levels within them. However, standing water levels of four bores located between 676- 712m west of the Site reported standing water levels ranging between 1.54 and 1.61m bgl. Refer to **Appendix G**

Groundwater monitoring wells have been installed on Site and in the area surrounding the Site during previous investigation works by other consultants (Golder Douglas (2018, 2021), as well as GHD (2015) and Pells Sullivan Meynink (PSM, 2015).The Golder Douglas documents were made available for ERM to review, however ERM was not able to obtain the GHD and PSM reports for review. Groundwater levels from each of these reports were, however summarised in the Jacobs Typsa (2022) Hydrogeological Design Report. Groundwater levels recorded at and surrounding the Site ranged from 16.9 m AHD (10.5 m bgl) at SMW_BH712w to -4 m AHD (1.9 m bgl) at SMW_BH046. Groundwater flow direction is inferred to be to the South/South-East. Groundwater elevations - in the southern portion of the Site in particular – are likely to be lower in recent years due to the nearby M4 East tunnel and associated infrastructure. Substaion No. 5 – a drained mined tunnel that connects with the M5 East mainline tunnel is 17 m below the Burwood North Southern Entry Shaft location and partially below the Burwood North Pedestrian Adit location (Jacobs Typsa, 2022). Excavation works on the M5 East were completed in 2018, so the maximum drawdown associated with the M5 East tunnel is considered likely to have already been realised.

ERM installed one additional groundwater monitoring well (BUR_MW108) in the central portion of the Site, to supplement the existing monitoring well network. The scope of this investigation included one round of groundwater monitoring and this was considered to provide sufficient data to inform this DSI. Regular groundwater monitoring for the purposes of informing groundwater management during construction is planned but this is not included in the scope of works covered by this report.

3. DESKTOP INVESTIGATION

3.1 Historical Aerial Photograph Review

Historic aerial photographs were sourced via LotSearch Pty Ltd and are presented in Appendix G of this report.

A summary of the historical aerial photograph review is provided in the table below.

Historical Aerial Date	Description
1930	The Site is observed to be mainly residential properties The surrounding properties to the north and south appear to be residential with the potential for some retail and commercial properties along Parramatta Road to the west of the Site. A large grassed area (Concord Oval) is present to the east of the Site with a small structure to the west of the oval (possibly sporting club facilities). Some vacant land adjacent to the residential houses appears in the western side of the Site along Burwood Road.
1942-1943	Development of two residential structures in the vacant land previously observed on the western side of the Site is now visible, additionally two sheds have been constructed in the backyards of those properties Development of the south eastern property appears to have been completed with a sectioned roof. Development of fencing and the structure on Concord Oval is visible It appears the properties to the south of the Site are now being used as a car sales centre.
1955-1956	A small structure on the south side of Parramatta road has been constructed, in the location of the present day mechanical workshop. No other significant changes from the 1942-1943 image noted.
1961-1965	Clearly visible use of the central property of the Site being used as a car park, most likely associated with the Pine Inn and adjacent commercial businesses. The residential property on the north west corner of Burwood road and Burton Street has been redeveloped into a petrol station.
1970-1978	A house in the central northern part of the Site has been demolished and a driveway established leading out to Burton Street. Minor structural improvements and extensions to warehouses along Parramatta road. No other significant changes to the Site. A new structure has been established on Concord Oval with additional residential development to the north of the Site.
1982-1986	No significant changes to the Site apart from the roof of one property in the south eastern portion of the Site being replaced. . Residential properties to the west of the Site have been demolished and an aged care centre was established in their place. Increased development of Concord oval grandstand and footpath areas.
1991-1994	Warehouse in the central portion of the Site has now been developed into a car wash. No other significant changes on-site. Minor development works in surrounding residential properties, with the installation of pools and tennis courts. Construction of a car park in Concord Oval.
2000-2005	Minor development and improvement works on-site with new roofing and extension of warehouse adjacent to the car wash and Pine Inn, along Parramatta road. Demolition of three residential properties in the north eastern portion of the Site, with the new development of a small apartment block in its place. Re development of properties to the west of the Site along Parramatta road adjacent to the aged care centre.
2011-2016	Construction of shed in property on the south eastern corner of Burwood and Parramatta road intersection within the Site. Minor development in the Reece plumbing warehouse with demolition and extension works. Minor re developments in the surround residential properties.
2021-Present	Solar panels installed on warehouse in the south eastern portion of the Site. No other significant changes to the Site. Major redevelopment works in progress on Concord Oval

3.2 Historical land Use

A review of Historical Business Directories provided by LotSearch indicated the properties located on the Site were historically for motor vehicles services such as radio repair, smash repairs, Hire car and car dealership services. Additionally mixed small commercial and retail businesses such as building and construction equipment hire and material supply, home décor, showrooms and food retail shops were previously located on-site.

Refer to **Appendix G –** LotSearch Report .

3.3 Regulatory Agency Search

Jacobs (2020) conducted a search of records pertaining to Section 58 of the Contaminated Land Management Act 1997 and this revealed two properties within 500 m of the Site. The first property was a service station located at 89 Parramatta Rd, Concord, which is listed as notified however regulation not required. The second property was the Burwood State Transit Authority (STA) Depot (bus depot), located on the corner of Shaftesbury and Parramatta Rd, Burwood with a former notice. Recent searches and Information provided by LotSearch Pty Ltd confirmed these previous findings.

Jacobs (2020) also indicated a search of the NSW EPA Protection of the Environment Operations (POEO) Act 1997 public register did not locate any records of licences, applications, notices, audits, or pollution studies/reduction programs for the Site or immediately surrounding premises.

Furthermore, the following listings were noted within the LotSearch report (Refer to Appendix G)

- No items of identified Local or State Heritage were observed within the Site. There were however multiple items of environmental planning instrument (EPI) heritage items listed within 1 km of the Site. Most notable the Bath Arms Hotel (Item 94) which is located approximately 20 m south west of the Site and Terrace houses (Item 016) located approximately 60 m south of the Site;
- The Site and surrounding areas within a 1 km buffer have not been identified as Bushfire prone land; and
- No native vegetation or Ramsar wetlands are identified to lie within the Site.

4. SUMMARY OF PREVIOUS INVESTIGATIONS

The previous investigation undertaken at the Site or relevant to the Site are listed below.

- Golder-Douglas Partners, *Groundwater Monitoring Report, 00013/11180 Sydney Metro West Geotechnical Investigation*, ref: 1791865-003-R-GWMR-RevA, dated 16 October 2018 (GDP, 2018).
- Golder-Douglas Partners, *00013/11180 Sydney Metro West Groundwater Monitoring Report – Stage 3 Locations*, ref: 1791865-026-R-GWM Stage 3-RevC, dated 12 June 2021 (GDP, June 2021).
- Jacobs (2020) Sydney Metro West Environmental Impact Statement – Westmead to The Bays and Sydney CBD, Ref. IA19980, dated 15 April 2020 (Jacobs EIS, 2020).
- Golder-Douglas Partners (2020) Factual Contamination Assessment Report, 00013/11180 Sydney Metro West Geotechnical Investigation, dated 6 May 2020 (GDP, 2020).
- ERM, Sampling Analysis and Quality Plan, Burwood Station Construction Site, Sydney Metro West: Central Tunnelling Package, Project no: 0628507, dated 18 January 2022 (ERM SAQP, 2022).
- Jacobs Typsa (2022) Sydney Metro West – Central Tunelling Package Burwood North Station Excavation –Design Report, dated 6 April 2022 (Jacobs Typsa, 2022).

4.1 GDP (2018)

GDP installed and sampled three groundwater monitoring wells (SMW_BH044, SMW_BH046s, SMW_BH046w) near the Site as part of a larger groundwater monitoring program across several sites.

Results were screened against relevant human health and ecological criteria. Human health screening criteria was not exceeded, however concentrations of some metals and inorganics in groundwater exceeded the adopted ecological criteria.

4.2 Jacobs EIS (2020).

Jacobs (2020) completed an Environmental Impact Statement (EIS) for the proposed Sydney Metro West project for the stations between Westmead and Sydney CBD this included the Burwood Construction Site. A historical aerial review of the Site indicated that the Site comprised of small scale commercial, retail and industrial land uses since the 1950s, with low density residential in the northern portion of the Site. Land use was reported to remain relatively unchanged except with small structural extensions, modifications and demolitions in the 1980s and 1990s. Key developments in the surrounding areas since the 1950s were noted to be the formalisation of Burwood Road in 1970, the development of Burwood Bus Depot in the 1970s and the development of Concord Oval in the 1980s which included the grandstand and associated landscaping.

The EIS reported overall the soils and groundwater in the vicinity of the construction site have a moderate potential contamination risk associated with current and historical activities. The report indicated 5 potential Areas of Environmental Interest (AEIs):

- AEI 41 – Mechanical Workshop- Leaks and spills from automotive facilities, car dealerships and bus depot
- AEI 42 - Car wash and detailing – Chemical and wax use
- AEI 43 - Former and existing structures – Hazardous building materials within or from on-site buildings / structures, demolition wastes
- AEI 44 - Parramatta Road – vehicle particulate deposition
- AEI 45 - Historical commercial / industrial use within locality – inappropriate chemical storage and use, industrial operations, waste disposal and management etc.

- Sub-station including potential firefighting activities

All potential sources of contamination were assessed as having a moderate risk with the exception of solvents/volatile organic compounds (VOC) and surfactants from AEI 42 in soil and Heavy metals and hydrocarbons in surface soil from AEI 45 which were noted to be very low potential contamination risk.

4.3 GDP (2021)

GDP installed and sampled seven groundwater monitoring wells (SMW_BH0712, SMW_BH713s, SMW_BH713, SMW_BH714s, SMW_BH714, SMW_BH715s and SMW_BH715) at/near the Site as part of a larger groundwater monitoring program across several sites.

Groundwater analytical results were below adopted human health criteria, however concentrations of several metals exceeded the adopted ecological criteria in each of the wells.

Per- and Polyfluoroalkyl Substances (PFAS) were detected at low concentrations at SMW_BH715s and SMW_BH715, however concentrations were below the adopted screening criteria.

4.4 Jacobs Typsa (2022)

This design report provides design information relating to the construction of the retention system for the Burwood North Station Box, Shaft and Passenger Adit. The report includes information relevant to this DSI, in particular, the Contamination Assessment Report and the Hydrogeological Assessment Report, which are provided as Appendix F and Appendix G of the document respectively.

The Contamination Assessment Report included the screening of soil and groundwater results from historical investigations against human health and ecological criteria. There were no exceedances of the human health criteria for soil samples at the Site. There were, however, some exceedances of the ecological criteria for metals in fill within the on-site soil dataset, and one sample exceeded the PFOS ecological screening criteria. Results of ASS field screening and sampling showed two shallow soil samples above ASS action criteria. The groundwater data did not have concentrations of any constituents above the human health criteria. There were several exceedances of the ecological criteria in groundwater samples in both on-and off-site monitoring wells.

The Hydrogeological Assessment Report contained information on the groundwater levels and flow, which was reported to be towards the south. Groundwater inflow and drawdown from the proposed dewatering were also evaluated. The influence of the M5 East tunnel and associated structures on the groundwater levels was discussed in detail.

4.5 Site History Summary

A review of historical information and previous investigations undertaken has indicated that the Site has primarily been used for retail and commercial/industrial purposes including a car wash, and two mechanical workshops, with residential housing in the northern portion of the Site. Minor fill is expected to be encountered across the Site associated with commercial property uses and residential developments, and groundwater is will require treatment of some metals and inorganics prior to discharge to a surface water body.

5. SITE INVESTIGATION

5.1 Data Quality Objectives

ERM prepared a sampling, analysis and quality plan (SAQP) (ERM, 2021) for this investigation to define the type and quality of data required to achieve the project objectives.

The Data Quality Objectives (DQOs) developed and presented in the SAQP (ERM, 2021) using the seven step DQO approach are summarised in the subsections below.

5.1.1 Step 1: State the Problem

The Site is to be assessed for suitability for a land use consistent with the definition of 'Commercial/Industrial' provided in the ASC NEPM. Based on the above the objectives of this investigation are to provide characterisation of the Site in accordance with ASC NEPM and NSW EPA guidance and provide sufficient spatial coverage for confidence that the Site data is representative.

Waste classification is required for spoil to be excavated from the Station Box in accordance with the Waste Classification Guidelines (NSW EPA, 2014). Section 12.19 (e) (ii) of the Deed specifies a sampling density for in-situ classification of no less than Industrial Waste Resources Guidelines (IWRG) 7, Sampling and Analysis: Soil Sampling (EPA Victoria 2009). Virgin Excavated Natural Material (VENM) and Excavated Natural Material (ENM) are to be classified in accordance with the requirements of the NSW Protection of the Environment Operations Act 1997.

The IWRG sampling rate relevant for soil volumes >200 m^3 is 1 per 250 m^3, using 95% UCL average.

The below table outlines the approximate volumes of spoil to be excavated from the Station Box and Station Access Excavation and the calculated sample density achieved from this DSI.

Table 5-1: Fill & Natural Soil Sample Summary

Material Type	Approximate Volume (m3)	No. Primary Chemical Sample collected	IWRG (2009) Table 3 Minimum number of samples 95% UCL average
Fill	3,473	15	14
Natural Soils/ Rock	111,227	29	445

*If the rocks/natural soil is VENM or ENM, IWRG sample density requirements do not need to be met.

5.1.2 Step 2: Identify the Decision

The decisions to be made based on the proposed scope of work and objectives are:

- Do contaminant concentrations in soils comply with the adopted site assessment criteria?
- Do soils pose an unacceptable risk to human health or the environment?
- Is the Site characterisation sufficient for preparation of a Remediation Action Plan (if required)?
- Can the in-situ materials be classified under the Waste Classification Guidelines or a relevant Resource Recovery Order?

5.1.3 Step 3: Identify inputs to the Decision

The inputs required to make the above decisions are as follows:

- Historical information gathered from the review of previous reports;
- Results of the field investigations and laboratory analysis; and
- Relevant legislation and guidelines.

5.1.4 Step 4: Define the Study Boundaries

- Spatial Boundaries – the physical investigation is limited to the area illustrated within Figure 1 and Figure 2 and the maximum depth of 20m bgl within the Station Box and 5m bgl outside of the Station Box.

Refer to **Figure 1** for Site boundaries.

- Temporal Boundaries – Information from previous reports provided by the Client to ERM included Jacobs (2020) along with the data collected by ERM (2021), as such the temporal boundary will comprise the period of these investigations until the issue date of this DSI report.

5.1.5 Step 5: Develop a Decision Rule

The Site will be considered suitable for its intended land use if contaminant concentrations within the assessed media (including the available historical data) comply with the adopted assessment criteria, as determined by the following decision rules being applied to the data:

- If the chemical contaminant concentration is greater than the relevant threshold, the 95 % Upper Confidence Limit (UCL) of the arithmetic mean for each contaminant of concern must comply with the respective assessment criteria;
- The individual chemical contaminant concentration should not exceed the adopted assessment criteria by more than 250 %;
- The standard deviation of individual contaminants should not exceed 50% of the adopted assessment criteria;
- No surface soils should contain any visible signs of asbestos contamination; and
- All asbestos concentrations should comply with the adopted assessment criteria.

Note: Due to the discrete, heterogeneous nature of asbestos contamination, statistical analysis as a decision rule is not appropriate for asbestos.

If any of the above criteria are unfulfilled, the Site will be considered potentially unsuitable for its intended use, and further action (which many include additional assessment and/or remediation) will be required.

Characterisation of the soils to be removed for Sydney Metro station construction for waste classification purposes will be considered adequate if the IWRG sampling rate (1 per 250 m^3, using 95% UCL average) is achieved within fill.

5.1.6 Step 6: Specify the Performance or Acceptance Criteria

A site is assumed to be contaminated until statistically proven otherwise (i.e. analyte concentration and 95 % UCL exceeds the assessment criteria), therefore two types of error are possible:

- Type 1 error (α or false negative), where the Site is assessed to be uncontaminated when it is actually is; and
- Type 2 error (β or false positive), when the Site is assessed to be contaminated though is actually not.

The more severe consequence is with Type 1 errors (α) since the risk of jeopardising human or environmental health outweighs the consequences of additional remediation costs.

The acceptable limits on decision errors applied during the review of the results was based on the Data Quality Indicators (DQIs) of precision, accuracy, representativeness, comparability and completeness outlined in **Table 5-2:**, in accordance with Schedule B (3) - Guidelines on Laboratory Analysis of the ASC NEPM.

The potential for significant decision errors was minimised by:

- Completing a robust Quality Assurance/Quality Control (QA/QC) assessment of the investigation data and application of the probability that 95% of data will satisfy the DQIs, therefore a limit on the decision error would be 5% that a conclusive statement may be incorrect;
- Achieving appropriate sampling and analytical density; and
- Ensuring that the assessment criteria selected was appropriate for current and future land use scenarios.

5.1.7 Step 7: Optimise the Design for Obtaining Data

The DQOs were developed based on a review of existing data, and discussions with the relevant project stakeholders. If information gathered during the assessment process indicated that the objectives of the works are not being met, then this would be communicated to the Client to enable the appropriate steps to be made to rectify the issue before the completion of the project. This was not necessary during project works as information gathered was considered appropriate for the purposes of the investigation.

5.2 Quality Assurance and Quality Control

The following DQIs were developed to assess field and laboratory procedures and statistically verify the validity of the data:

Table 5-2: Data Quality Indicators

Item	Indicator
Date Precision and Accuracy	
Relative Percentage Difference (RPD)	If: >10 x laboratory Limit of Reporting (LOR), then < 30% inorganics and 50% organics (field); <10 x laboratory LOR: Assessed on individual basis (field) >5 x laboratory LOR: 50% (laboratory) <5 x laboratory LOR: No Limit (laboratory)
Laboratory Performance	Based on acceptance criteria of laboratory as specified on certificate of analysis, includes: blank samples, matrix spikes, control samples, and surrogate spike samples. Use of analytical laboratories with adequately trained and experienced testing staff experienced in the analyses undertaken, with appropriate NATA certification.
Fieldwork Performance	Use of trained and qualified field staff; same sampler(s) used for all recoveries. Appropriate sampling methods used, minimising the opportunity for cross-contamination.
Sample Coverage	Representative coverage of potential contaminants, based on site history, site activities and site features.
Data Representativeness	
Sample and Analysis Selection	Representativeness of all contaminants of concern.
Trip Blanks	No detection above LOR
Trip Spikes	Recoverable concentrations of volatiles between 60-140%

Item	Indicator
Rinsate	No detection above LOR
Laboratory Selection	Adequate laboratory internal quality control and quality assurance methods, complying with the ASC NEPM.
Documentation Completeness	
Documentation Review	Review of acquired documented information pertaining to site history
Fieldwork Observations	Preparation of bore logs, sample location plans.
Chain of Custody Records	Laboratory sample receipt information received confirming receipt of samples intact and appropriate chain of custody.
	NATA registered laboratory results certificates provided.
Data Completeness	
Laboratory Requirements	Analysis for all contaminants of concern according to the SAQP.
	Field duplicate sample numbers complying with ASC NEPM.
	Trip spike/trip blank samples prepared and sent with field samples regularly.
Comparability	
Fieldwork Performance	Use of consistent test methods for each sample.
	Using appropriate and consistent techniques for sample recovery.
	Using experienced sampler(s).
Laboratory Performance	Use of NATA accredited laboratories.
	Test methods comparable between primary and secondary laboratory.
	Acceptable RPD's between original samples and field duplicates and inter-laboratory triplicate samples.
	LOR should not exceed the Site Assessment Criteria.

5.3 Investigation Rationale

The Deed requires that the DSI consider Areas of Contamination Concern (ACCs) and also the areas that will be disturbed by the construction activity. **Figure 4** shows both ACCs and disturbance areas for reference, and demonstrates that the ACCs cover the whole Construction Compound. The DSI has appropriately included the whole Construction Compound footprint.

5.3.1 Soil

A total of 39 sampling locations were advanced across the Site in accordance with the NSW EPA Sampling Design Guidelines (1998) for an area of 1.4 hectares (ha) achieving the suggested minimum sampling density.

Waste classification is required for spoil to be excavated from the Station Box in accordance with the Waste Classification Guidelines (NSW EPA, 2014) and Section 12.19 (e) (ii) of the project Deed as outlined in Section 5.1.1.

As part of ERM's investigations, the 25 locations outside of the Station Box area were advanced to provide site characterisation data and spatial coverage of the proposed construction support area. Additionally, the 12 sampling locations within the Station Box were to provide site characterisation data and waste classification data for the proposed excavation and off-site removal of fill and natural materials to be removed as part of the Station Box works. Intrusive works were targeted to reach a depth of up to 5 m bgl outside the Station Box and a maximum of 20 m inside the Station Box.

Additional investigations undertaken by ADE involved advancing 11 boreholes and 3 test pit locations within fill material, with the objective providing vertical and lateral delineation of asbestos previously detected by ERM at two locations. Further to this, additional locations were intended to increase the spatial coverage of asbestos investigation locations.

5.3.2 Groundwater

Groundwater sampling was conducted for the purposes of site characterisation and developing the conceptual site model including evaluation of source-pathway-receptor (SPR) linkages for site users and receptors of groundwater removed during construction.

5.4 Investigation Methodology and Analysis

Fieldwork undertaken by ERM Environmental Scientists was completed between 15 December 2021 and the 18 January 2022 in accordance with the scope of works outlined in Section 1.4 and ERM's standard work procedures and involved sampling at 13 borehole locations outside the Station Box area and 12 locations inside the Station Box Area. Additionally, one groundwater well was installed on-site (BUR_MW108).

Additional soil investigations undertaken by ADE were completed between 24 March and 6 May 2022. This involved progressing a combination of 14 borehole and test pit locations, targeting fill material. While test-pits were proposed at each of these locations, due to space and access constraints, only three test pits were completed in the north-west portion of the Site. ADE's field investigation methodology was outlined to ERM by Thesan Naidoo of ADE (pers.comm, May 2022).

Four groundwater monitoring wells were planned to be sampled by ERM as part of these investigation works, however several of the wells available were dry or destroyed, with two able to be sampled.

5.4.1 Soil Logging

Soil logging undertaken by ERM was conducted by a suitably qualified and experienced environmental scientist in general accordance with AS 1726 and ERM standard field procedures.

Samples were logged, and the following information was recorded in the field: soil/rock type, colour, grain size, sorting, angularity, inclusions, moisture condition, structure, visual signs of contamination (including staining and observations of anthropogenic material including fragments of fibre cement sheeting). Similarly, ADE logged soil fill characteristics, specifically noting whether ACM was observed in the field.

Borehole logs completed by both ERM and ADE are presented in *Appendix B*.

5.4.2 Field Screening

As part of ERM's investigations, at regular intervals within each borehole, including a minimum of 0.5 m intervals in fill and during sampling depths for natural material, soils were placed in a zip lock bag and screened in the field for head space vapours (principally, volatile organic compounds (VOCs) but may also include some volatile inorganic compounds) using a calibrated photo-ionisation detector (PID). The sensor bulb used in the PID had an ionisation potential (IP) of 10.6 eV.

ERM field records showing calibration details are provided in *Appendix C*.

Due to the nature of the COPC (ie. non-volatile asbestos) for ADE's investigation, VOCs were not screened using PIDs.

5.4.3 Soil Sampling

Soil sampling in the 25 ERM locations was undertaken first by a combination of hand auger and high pressure water / vacuum extraction (referred to in the borehole logs as Non Destructive Drilling (NDD) to a depth of 1.5 m. Thereafter, direct push drilling and/or solid fight augering was utilised until hard natural rock was encountered. Deeper bores into rock were advanced using air flush rotary drilling.

Solid flight augering was generally only utilised after hand augering and push tube sampling of the top layers of material.

Where solid flight augering was utilised for sampling, larger clumps of soil were targeted and placed immediately into sample containers in an attempt to minimise the potential loss of volatiles.

The potential for cross contamination during sampling was reduced during NDD by stopping NDD 0.1 m before target sampling depth, and commencing hand augering through to target depth. The hand auger was decontaminated between samples.

Samples from the push tube were selected directly from the cores.

A minimum of two samples per location were selected for analysis (with the exception of locations BUR_BH121 and BUR_BH124, where sample recovery was limited to fill soils), based on field observations and screening. A total of 84 soil samples and 1 potential bonded ACM fragment sample were collected for analysis.

ADE progressed eleven boreholes and three test pits through fill material up to a maximum depth of 0.5 m using a hand-auger and an excavator, respectively. Two samples were collected from each location, at the surface (0-0.2mbgl), and 0.3-0.5mbgl. Based on ERM's investigation, fill material typically extended to 0.8mbgl (and up to 1, and 1.5 mbgl at two of the 24 investigation locations). For this reason, asbestos samples collected at these depths are considered representative of fill material across the Site.

Due to the nature of sampling using a hand auger, a sufficient volume of soil allowing asbestos sieving (10L) was only available at the three test-pit locations. Asbestos sieving undertaken in the field was completed in accordance with NEPM (2013) guidelines. 500 mL soil samples were collected for analytical asbestos analysis at 12 locations, and approximately 50 mL samples collected at two locations.

5.4.4 Groundwater Sampling

As part of ERM's investigations, a total of three groundwater wells were gauged during this investigation, however pre-existing groundwater well RY718_BH1333 was noted to be dry. Hence, a total of two groundwater samples were collected as part of this investigation. One groundwater monitoring well was installed during this investigation (BUR_MW108) in the central portion of the Site. Additionally, one existing groundwater well located in the southern portion of the Site (AF_BH28, but labelled RY718_BH1331 during sampling) was also sampled.

Prior to sampling, the standing water levels (SWL) were gauged using an interface meter from the top of well casing. In addition, the total depth of the groundwater monitoring well was recorded. Field parameters including pH, electrical conductivity, dissolved oxygen and oxidation/reduction potential were measured prior to sampling using a portable water quality meter. Calibration certificates for field testing equipment is provided in *Appendix C*.

Sampling of the groundwater wells was undertaken via bladder pump micro purge methods employing compressed air to lift groundwater and avoid volatile loss. Samples for metals analysis were field filtered using a 0.45 µm pore size filter.

ERM was not made aware of several other pre-existing groundwater wells at the Site at the time of the DSI, but the historical groundwater data from these wells has been included in the DSI to further inform the conceptual site model.

5.4.5 Sample Handling

All sampling was conducted using disposable nitrile gloves and samples were packed into appropriately labelled, appropriate laboratory supplied containers for the analysis required.

Samples were collected with minimal headspace remaining in the jar/bottle to reduce the potential for loss of volatile COPCs during sampling and transport.

Samples were transferred to the laboratory and analysed under chain of custody control.

5.4.6 Decontamination

ERMs investigation involved decontamination of the down hole drilling equipment (casing, augers and sampler) was conducted prior to drilling the first hole and between locations by initially spraying with water using a high pressure hose, then applying Liquinox solution, and then rinsing using the high pressure hose.

5.5 Laboratory Analytical Strategy

For ERM's DSI, soil and groundwater samples, including intra-laboratory duplicate samples, were analysed by ALS laboratory. Inter-laboratory samples were analysed at Eurofins. Both laboratories are NATA accredited for the analyses performed.

Selected soil samples were submitted for laboratory analysis for TRH, BTEXN, metals, PAH and PCBs. At least one sample from each borehole was also selected to be analysed for OC and OP pesticides, VOCs and PFAS. A total of 39 primary samples were analysed for PFAS.

Groundwater samples were analysed for a broad suite of analytes including TRH, BTEXN, PAHs, VOCs, Heavy metals plus iron, PFAS, Ammonia, nitrate, total N, total P, Major anions, major cations and Total dissolved solids.

Additional soil samples were collected in the shallow fill (top metre) for in-situ waste classification purposes. These results have been included in this DSI report to enhance the understanding of site conditions.

ADE submitted soil samples to Sydney Laboratory Services (SLS) for asbestos identification. Laboratory certificates indicate the adopted method is consistent with "*National Environment Protection (Assessment of site contamination) Measure, Schedule B1*" and "*The Guidelines from the Assessment, Remediation and Management of Asbestos-Contaminated Sites in Western Australia - May 2009*", however is not NATA accredited for this analysis.

ADE indicated that small sample volumes (50 ml) submitted for soils sampled at two locations (SES-SEA1 and SES-SEA3) were analysed for asbestos presence/absence.

Additional soil samples included in ADE laboratory report – SLS Reference: 2202125, were analysed as part of ADE's waste classification assessment and were not intended for delineation purposes. ERM note that asbestos was not detected in this additional waste classification sample set.

5.6 Quality Assurance / Quality Control

In the course of this investigation a number of QA/QC measures were implemented as part of ERM's investigation to check the accuracy, precision and overall validity of the results obtained. These include:

- Collection of ten duplicate and ten triplicate soil samples for assessment of intra- and inter-laboratory precision respectively. Intra-laboratory duplicate samples are prefaced with "D0X" and inter-laboratory duplicate samples are prefaced with "T0X" within the data summary tables;
- Collection of three trip blanks and three trip spikes during soil investigations to assess the potential for loss or transfer of volatiles during sample storage and transport;
- No groundwater duplicate samples were collected from Burwood as groundwater sampling was undertaken as part of a wider groundwater monitoring program for the Sydney Metro project. Duplicate samples were collected as part of this monitoring program and have been included the QAQC assessment provided in *Appendix D*.;
- Internal laboratory QA/QC procedures:
  - method blanks;
  - laboratory duplicates;
  - laboratory control samples;

- matrix spike samples;
- surrogate recovery samples; and
- analysis holding time reviews.

Calibration certificates for field instruments are presented in *Appendix C*, and laboratory QA/QC procedures and results are presented in *Appendix D*.

QA/QC samples were not collected as part of ADEs additional investigation, and due to the typically heterogeneous nature of asbestos contamination, is not considered warranted.

5.7 SAQP Non- Conformances

5.7.1 Fewer groundwater wells sampled

Fewer groundwater wells were sampled than planned as monitoring well SMW_BH046 was damaged, SMW_BH044 was inaccessible and RY718_BH1333 was dry.

The groundwater quality information from the two wells that were sampled is sufficient to use alongside historical groundwater results from the Site to characterise the groundwater quality at the Site for the purpose of this DSI, and so the primary objectives are considered to have been met.

5.7.2 Fewer asbestos test pits

Additional characterisation of asbestos in fill was intended to be undertaken by ADE using test-pitting methods. Due to access constraints, test pits was limited to three of the 14 sample locations. While sampling using a 150mm hand-auger does not provide clear visibility of potential asbestos impacts, additional samples submitted for analytical analysis provides further confidence of the presence or absence of asbestos in fill across the Site.

5.7.3 Analytical frequency

Analytical frequency was generally in accordance with the SAQP, however during the initial phase investigations (undertaken by ERM) asbestos samples were only able to be collected from 21 out of the 25 locations due to limited recovery of soil. Of the four locations where asbestos analysis was not conducted, three of these locations (BUR_BH108, BUR_BH110 and BUR_BH111) were located within the Station Box. As materials from these locations are proposed to be removed from Site, the characterisation of these materials is not considered to detract from assessment of the future land use suitability of the Site or impose significant limitations on the assessment of asbestos in these areas as materials will be assessed further during the waste classification process. One location (BUR_BH120) was located outside the Station Box. Materials from this location were not visually observed to contain signs of asbestos. Samples were analysed for asbestos in all adjacent locations.

Further asbestos characterisations undertaken by ADE at 14 sample locations (targeting two ERM locations, in addition to another six unique locations) is intended to reduce data gaps identified by the initial ERM investigation.

Based on the above, analytical data obtained by both ERM and ADE as part of the DSI is considered sufficient for site characterisation.

6. SITE ASSESSMENT CRITERIA

6.1 Overview

This detailed investigation was undertaken with reference to the following publications:

- National Environment Protection (Assessment of Site Contamination) Measure 1999 (ASC NEPM) (NEPC (2013);
- Health screening levels for petroleum hydrocarbons in soil and groundwater. Summary, CRC CARE Technical Report no. 10 (CRC Care, 2010);
- Technical Report no. 39, Risk-based management and remediation guidance for benzo(a)pyrene, Cooperative Research Centre for Contamination Assessment and Remediation of the Environment ('The Technical Report', CRC CARE, 2017);
- PFAS National Environmental Management Plan Version 2.0 (HEPA, 2020);
- Guidelines for Managing Risks in Recreational Water (NRHMC, 2008); and
- Australian and New Zealand guidelines for fresh and marine water quality (ANZG 2018).

6.2 Adopted Screening Levels

6.2.1 Soils

Based on the proposed future land use, ERM will be assessing the soil data against the 'Commercial/Industrial' land use criteria as defined in the ASC NEPM. Due to the observed underlying clays across the Site, the screening levels for clay (fine) soils have been adopted. Additionally, since future green space planting above existing fill is potentially possible, the ecological investigation and screening levels for commercial/industrial land use (fine soils) will be adopted.

Screening levels applicable to the assessment of soils include:

- ASC NEPM (2013) Health Investigation Level (HIL)
  - HIL D – Commercial / Industrial
- ASC NEPM (2013) Soil Health Screening Level (HSL)
  - HSL D – Commercial / Industrial
- ASC NEPM (2013) Management Limits
  - Commercial Industrial
- ASC NEPM (2013) Ecological Investigation Levels
  - EIL Commercial / Industrial (site-specific calculated from representative natural material sample (BUR_BH123_1.0) with the most conservative value adopted for Cr III).
  - ESL Commercial / Industrial (fine) (except for benzo(a)pyrene criteria, for which a high reliability guidance value has been developed (CRC Care, 2017)
- CRC CARE (2011) Soil Health Screening Levels for Direct Contact
  - HSL-D – Commercial / Industrial
- CRC CARE (2011) Soil Health Screening Level (HSL)
  - Intrusive maintenance worker (shallow trench)
- HEPA (2020) NEMP Human health investigation levels for soil
  - Industrial/commercial (HIL-D)
- HEPA (2020) NEMP Ecological guideline values for soil
  - Ecological direct exposure
  - Ecological indirect exposure

6.2.2 Aesthetic Criteria

Although no specific numeric aesthetic guideline values are provided, the ASC NEPM requires the consideration of aesthetic issues (as a result of contamination) arising from soils within the Site. The following assessment criteria have been used when considering soil aesthetics:

- No highly malodourous soils, taking into consideration the natural state of the soil at the Site; and
- No staining or discolouration in soils, taking into consideration the natural state of the soil.

6.2.3 Groundwater

ERM conducted groundwater sampling on 20 and 21 January 2022, and analytical data is screened against the following in this DSI:

- ANZG (2018) Fresh Water
  - Slightly to moderately disturbed ecosystems
- NHMRC (2008) Recommended Recreational Guidelines
  - Aesthetic
  - Health
- NEPM (1999) Groundwater HSLs for Vapour Intrusion
  - HSL D Commercial/Industrial (Clay)
- HEPA (2020) NEMP Ecological guideline values for water

6.2.4 Soil Vapour

No significant potential sources of soil vapour were identified during soil or groundwater investigation works at the Site. As such soil vapour sampling was not considered necessary for the purpose of this investigation.

7. RESULTS

Site works conducted in accordance with the methodology stated in *Section 5* was undertaken by ERM between 16 December 2021 and 21 January 2022, and by ADE between 24 March and 6 May 2022.

The locations of investigation locations are presented in *Figure 2*. Detailed descriptions of the soils observed during fieldworks are presented on the borehole logs in *Appendix B*.

7.1 Subsurface Conditions and Field Screening

The fill material encountered near the surface was variable but included coarse and fine silty clays with gravel inclusions, crushed sandstone, basalt 'road base' gravels and minor foreign materials such as brick, plastic and glass.

Brown/red/orange and grey silty clays and clays were encountered below fill material with underlying shales and siltstone observed at depth.

Field headspace screening of soils sampled by ERM ranged from 0.1 ppm to 41.2 ppm. All PID measurements were calibrated to an isobutylene standard and are presented in full on the borelogs provided in *Appendix B*.

7.2 Soil Laboratory Results

Analytical results for soil samples are summarised below:

- Asbestos fines were not detected in any of the samples submitted for analysis. Bonded Asbestos containing material (ACM) fragments were visually identified and confirmed by the laboratory to be asbestos in sample BUR_BH116_0.2 ACM. Additionally sample BUR_BH123_0.3 reported asbestos cement debris within the soil sample. Further investigations undertaken by ADE showed that ACM was not visually identified in the field. ACM was not detected in soil samples analysed in the laboratory from the four delineation samples around BUR_BH116, nor BUR_BH123.
- PFAS was detected in 1 sample within fill soils, however this were found to be compliant with the relevant NEMP (2020) ecological (direct and indirect) and HIL D criteria.
- Trace OCPs and OPPs were detected in four samples submitted for analysis, however these were reported to be compliant with the adopted HIL D criteria.
- PCBs were detected in one sample (BUR_BH110_0.2), however this was reported below the HIL D criteria.
- BTEX were not detected in any of the samples submitted for analysis.
- Total Recoverable Hydrocarbons were detected in 23 samples analysed, contained hydrocarbons in the C10-C40 range. Detected concentrations were below the relevant screening criteria for all samples.
- PAHs were detected at numerous locations within fill materials across the Site. Benzo(a)pyrene results were below the high reliability ecological screening criteria used (CRC Care, 2017). Carcinogenic PAHs as benzo(a)pyrene TEQ were compliant with the human health screening criteria.
- Chlorinated solvents or VOCs were not detected in any samples submitted for analysis.
- One soil sample exceeded the adopted human health criteria for Lead (BUR_BH115_0.5). The 95% UCL of the mean was calculated to be below the adopted criteria for Lead. This sample was also from the area south of Parramatta Rd to be excavated for station access, so will be removed from the Site during the Sydney Metro construction activities.

- Several samples exceeded ecological screening criteria for metals (copper, lead or zinc). Calculation of the 95% UCL for these results were below the adopted EIL criteria.
- All other samples reported metals concentrations compliant with the adopted screening criteria.

Soil analytical results are presented in the summary tables at the rear of this report and laboratory certificates are presented in *Appendix E*. UCL calculations were processed in PRO UCL and results are provided in *Appendix F*.

Jacobs Typsa (2022) summarised historical soil data and these summary tables are presented in *Appendix I*. Results of the historical data was generally consistent with the ERM/ADE data. Human health and ecological criteria were not exceeded with the exception of one sample that exceeded the EIL for nickel and another sample that exceeded the EIL for PFOS. Both samples were from the same borehole location, and the particular location will be excavated for the Station Box. Asbestos was not observed in the historical sampling.

As noted in the Jacobs/Typsa report, acid sulfate soil action criteria was equalled in one sample and exceeded in another. The field parameters for the sample that exceeded the action criteria were, however, inconsistent with ASS/PASS.

Soil results were screened against relevant waste classification criteria separately in the Waste Classification Report, provided as Appendix J.

7.3 Groundwater Gauging and Field Parameters

Groundwater gauging and sampling was completed at the Site on the 20 and 21 January 2022. A total of three groundwater wells on-site were gauged during this investigation. However, well RY718_BH1333 was observed to be dry. As such, no field parameters or sampling was able to be conducted from this well. In February, additional groundwater gauging was conducted. The gauging results and summary of field parameters measured for the groundwater monitoring event are summarised below:

Table 7-1: Summary of Groundwater Field Parameters

Date	Well ID	SWL[1] (mBTOC)[2]	SWL (m AHD)[3]	Depth to Bottom of well (m BTOC)	pH	Temp (^{0}C)	Conductivity (mS/cm)	DO (mg/L)	Redox (mV)
January Data									
20/01/2022	BUR_MW108	5.315	6.685[3]	18.77	6.9	21.5	8.53	4.33	30.8
21/01/2022	AF_BH28 (incorrectly labelled and reported as RY718_BH1331)	13.825	-0.425	20.397	10.6	22.4	2.549	1.26	93.0
20/01/2022	RY718_BH1333	-	-	7.806	-	-	-	-	-
February Data									
21/2/2022	SMW_BH44	7.734	14.866	32.550	-	-	-	-	-
17/2/2022	SMW_BH046s	1.552	4.918	2.873	-	-	-	-	-

[1] Standing Water Level (SWL)

[2] meters below top of casing (mBTOC)

[3] ground elevation of nearby SWM_BH015 used to calculate groundwater elevation

7.4 Groundwater Laboratory Results

Groundwater laboratory results for the two groundwater wells sampled (BUR_MW108 and AF_BH28 (reported incorrectly as RY718_BH1331)) are summarised in **Tables 2a-2d**. One sample (BUR_MW108) reported a trace detection of 6:2 Fluorotelomer Sulfonate. All other samples reported no detections of PFAS.

Minor detections of TRH ranging between C10-C40 were reported in location AF_BH28 (RY718_BH1331). There were no reported detections of SVOCs, VOCs, pesticides and PAHs. Concentrations of metals (cadmium, copper, nickel and zinc) exceeded the adopted ecological criteria at location BUR_MW108, with only a minor copper exceedance reported AF_BH28 (RY718_BH1331). Nitrogen and phosphorous exceeded ecological criteria in both groundwater well samples. All other analytes were found to be compliant with the screening criteria

Jacobs Typsa (2022) summarised historical soil data and these summary tables are presented in *Appendix I*. Results of the historical data was generally consistent with the ERM/ADE data. Human health criteria were not exceeded, however some metals and inorganics, and one VOC compound exceeded the ecological screening criteria. PFAS compounds were detected in the sample from SWM_BH015 and

8. DATA QUALITY EVALUATION

8.1 ERM 2021 Investigation (including ADE investigation data)

A QA/QC assessment detailing field procedures, laboratory methods and an analysis of QA/QC sampling results from the investigation is provided in *Appendix D*.

Overall, the sample data collected by ERM and ADE is considered to be of a suitable standard to be used in this report.

8.2 Previous Investigations

As the conceptual site model presented in this report will incorporate historical data from previous investigations, the quality assurance and quality assurance evaluations within the previous investigation reports were reviewed to ensure any unsuitable data is excluded from the conceptual site model evaluation. Items to note are provided in the table below.

Table 8-1: Summary of Previous Investigations

Investigation Report	Summary of Quality Assurance/ Quality Control
Golder-Douglas (2018) Groundwater Monitoring Report – Sydney Metro West Geotechnical Investigation	Golder Douglas note that although variances and non-conformances with acceptable criteria were noted, that these are considered unlikely to affect the validity of the data. The precision of most duplicates of organic compounds was acceptable and variability in PAH and TRH attributed to variance in laboratory handling, extraction and measurement procedures. SMW_BH044, SMW_BH046 and SMW_BH046s data is relevant to this DSI
Golder-Douglas (June 2021) Sydney Metro West- Groundwater Monitoring Report – Stage 3 Locations –	Golder Douglas note that although variances and non-conformances with acceptable criteria were noted, that these are considered unlikely to affect the validity of the data. The quality of the data was concluded to be acceptable for environmental interpretive purposes. ERM's review concurs with this assessment. SWM_BH712, SWM_BH713, SWM_BH713s, SWM_BH714, SWM_BH714s, SWM_BH715 and SWM_BH715s data is relevant to this DSI..
Jacobs Typsa (2022) Sydney Olympic Park Excavation –Station Shaft	While no data was collected by Jacobs Typsa, data from historical investigations was summarised. ERM has verified the consolidated data presented (and used in this DSI) against the original data sources for all results except AF_BH28, AF_BH29i, R718_BH1326 R718_BH1331, R718_BH1341, R720_LSJH_TC-BH409, R720_LSJH_TC-BH410, R720_LSJH_TC-BH411 (as ERM does not have a copy of the original data source).

9. CONCEPTUAL SITE MODEL

9.1 Overview

A Conceptual Site Model (CSM) is the qualitative description of plausible mechanisms by which human and/or environmental receptors may be exposed to site contamination. For exposure to be considered possible, some mechanism ('pathway') must exist by which impact from a given source can reach a given receptor. This is classed as a source-pathway-receptor (SPR) linkage.

The following section presents a summary of the potential sources, pathways and receptors applicable to the Site, as well as identifying potential source-pathway-receptor (SPR) linkages, based on the previous investigation by Jacobs (2020). The identification of SPR linkages forms a key part of developing the CSM for the Site.

The potential for SPR linkages to exist has been assessed assuming ongoing commercial / industrial site use in the current site configuration. The assessment is based on ERM's review of previous investigations, the findings of the current investigations and knowledge of the prevailing conditions at the Site.

9.2 Potential Sources of Contamination

Based on the previous investigations supplied to ERM, the known and suspected Areas of Environmental Concern (AECs), along with the Contaminants of Potential Concern (COPC) are summarised in Table 9-1.Table 9-1: AECs and COPCs

Table 9-1: AECs and COPCs

Areas of Environmental Concern	Contaminants of Potential Concern
Mechanical Workshop- Leaks and spills from automotive facilities, car dealerships and bus depot	Heavy metals, hydrocarbons (TRH, BTEX, PAH), asbestos
Car wash and detailing – Chemical and wax use	Solvents (VOC), surfactants, PFAS
Former and existing structures – Hazardous building materials within or from on-site buildings / structures, demolition wastes	Heavy metals, hydrocarbons (TRH, PAH), pesticides, asbestos
Parramatta Road – vehicle particulate deposition	Lead, PAHs, asbestos
Historical commercial / industrial use within locality – inappropriate storage and use, industrial operations, waste disposal and management etc.	Heavy metals, hydrocarbons (TRH, BTEX, PAH), asbestos
Sub-station including potential firefighting activities	Heavy metals, hydrocarbons (TRH, PAH), PCB, PFAS, asbestos

9.3 Nature and Extent of Contamination Present

The environmental media on the Site previously identified as potentially contaminated are:

- soils (fill material and underlying natural soils);
- rock; and
- groundwater.

Jacobs (2020) conducted an EIS which included the Site which assisted in identifying potential AECs on the Site.

The data screened in Tables 1a to 1d include soils from the Station Box. It should be noted that these materials will be excavated and removed from the Site, and will therefore not be directly relevant to the assessment of future site suitability for the intended site use. However, these results have been included to provide spatial coverage and overall site characterisation data, and to allow consideration of potential risks to construction workers.

The data is discussed in the following subsections.

9.3.1 Soil /Rock

Fill materials on the Site have been reported to contain sandstone, concrete, brick, plastic and ACM (asbestos containing material) fragments. Natural soils below the fill consist of Silty clays and clays, with shales underlying the clays.

Of the 97 samples analysed for metals (including intra and inter laboratory duplicates), concentrations exceeded the commercial/industrial ecological criteria and HIL D criteria for Lead in one sample (BUR_BH115_0.5). However, the 95%UCL calculated was below the adopted screening levels. Additionally, 4 samples exceeded the adopted EIL for Copper and 5 samples exceeded the EIL criteria for Zinc. Calculation of the 95% UCL for these results indicated all were compliant with the adopted EIL criteria.

For residual materials outside the Station Box, the 95% UCL for metals was calculated for these locations with results indicating all values were below the adopted site criteria.

Table 9-2: Soil Metals Summary (mg/kg)

Analytes	Cu	Pb	Zn
NEPM (1999) EIL – Comm./Ind. Criteria	**190^**	**1,800**	**610^**
NEPM (1999) HIL D – Comm./Ind. Criteria	**240,000**	**1,500**	**400,000**
No. of Results*	82	82	82
Min. Concentration	<5	5	<5
Max Concentration	207	4380	1180
Standard Dev.*	31	494	167
95% UCL*	37.28	360.9	175.9
No. Guideline exceedances*	4	1	5

**- values in table excludes intra and inter-laboratory duplicates*

^- calculated Site specific EIL see Appendix H

Polycyclic Aromatic Hydrocarbons (PAHs) were detected at numerous locations across the Site in fill materials. Benzo(a)pyrene results were found to be below the high reliability ecological screening criteria used (CRC Care, 2017). Carcinogenic PAHs as benzo(a)pyrene TEQ were not reported to exceeded the human health screening criteria.

Polychlorinated Biphenyls (PCBs) were detected at one sample location (BUR_BH110_0.2) at a concentration below the screening criteria.

Trace pesticides were detected in 3 samples (DDT+DDE+DDD in samples BUR_BH103_0.1, BUR_BH104_0.2 and Chlordane in sample BUR_BH117_0.2). All pesticide results were below the screening criteria.

A minor detection of PFOS was reported in one duplicate sample (T01_20211216, intra laboratory duplicate of sample BUR_BH103_0.1) . All reported concentrations were below human health and ecological criteria.

Bonded asbestos was detected by ERM at two sample locations within the surface fill materials (BUR_BH116_0.2 ACM, and BUR_BH123_0.3). Delineation sampling undertaken by ADE did not identify asbestos in any samples in delineation sample locations surrounding these locations, indicating asbestos contamination within the fill is likely isolated and remediation would be limited to these two hotspots.

9.3.2 Groundwater

Standing water level was measured to be approximately 5.3 m below top of casing (BTOC) (approx.. 6.7m AHD) in the central portion of the Site and 13.8 m (BTOC) (-0.425m AHD) on the south side of Parramatta road. Based on the available data, groundwater flow is to the east and south. The much lower groundwater levels in the south of the Site are consistent with the effects of drawdown from the M5 East tunnel. Field parameters measured during groundwater sampling indicated pH, temperature and redox were observed to be lower in BUR_MW108 than AF_BH28 (reported incorrectly as RY718_BH1331). Conductivity and Dissolved Oxygen (DO) were observed to be lower in well AF_BH28 (RY718_BH1331).

Results from groundwater sampling from the two on-site groundwater wells (AF_BH28 (RY718_BH1331) and BUR_MW108) indicated metals (arsenic, cadmium, copper, nickel and zinc) exceeded the adopted screening criteria at location BUR_MW108, with only a minor arsenic and copper exceedance reported in AF_BH28 (RY718_BH1331). Additionally, concentrations of nitrogen and total phosphorus in both wells exceeded the screening criteria. All other analytes were found to be compliant with the screening criteria.

This is consistent with results from historical groundwater sampling at and surrounding the Site. Human health criteria were not exceeded, however some metals and inorganics, and one VOC compound exceeded the ecological screening criteria.

9.4 Potential Receptors

The potential sensitive receptors for contaminants present at the Site include:

- Present (Central Tunnelling Package and future Sydney Metro construction workforce) and future construction workers (broader site area following completion of the Metro station) on the Site who may potentially be exposed to COPCs through direct contact with impacted soils and groundwater, and/or inhalation of dusts associated with impacted soils;
- General public / passers-by during construction works (dust and odour, potential direct contact with soil via trucks transporting waste spoil if sheeting/wheel washing inadequate);
- Future workers and customers on the finished Sydney Metro West line;
- Future intrusive maintenance workers working in or around the Sydney Metro West station;
- Future users of the areas of the Site that will be developed for use subsequent to Sydney Metro's use of the land as a construction compound;
- Terrestrial ecological receptors on the Site; and
- Treatment plant, groundwater movement, or long term via operational tunnel/station groundwater drainage and discharge).

9.5 Potential Exposure Pathways

The following potential pathways of exposure that may result from impact to soil, groundwater or air are likely relevant to the Site Area:

- Discharge of groundwater to surface water (Parramatta River);
- Direct contact with impacted soil or groundwater; and
- Inhalation of asbestos fibres and/or dust.

9.6 Contamination Migration Potential

The construction works has potential to affect the distribution of contamination, particularly due to dewatering of the Station Box which is likely to result in groundwater flow moving towards the station box. Water pumped from the Station Box during construction will be directed to a water treatment plant, and discharged into a stormwater drain that flows towards Canada Bay within the Parramatta River. The tunnel construction methodology is understood to result in relatively limited groundwater drainage, and the tunnel will be constructed as a tanked structure to minimise impacts on groundwater during operation. The Station Box dewatering is therefore considered to be the most significant mechanism for creating potential migration of contaminated groundwater.

Further, disturbance created by excavation works could create dust, and/or mobilise soil vapours. These potential migration pathways are assessed as follows:

9.6.1 Migration via Dewatering

Groundwater monitoring data indicates groundwater quality exceeds ecological criteria for some metals, however no significant groundwater impact has been identified. The groundwater monitoring network and dataset is considered a sufficient basis to provide adequate groundwater characterisation. Whilst groundwater flow patterns will be affected, it is not considered likely that the change in flow direction will create migration that would result in a change to the risk profile at the Site.

Ongoing groundwater monitoring is recommended (and is understood to be planned) to provide data on changes to groundwater throughout the duration of the works.

9.6.2 Migration via Water Treatment and Discharge

Treatment and discharge of groundwater potentially leads to a more rapid pathway for groundwater to enter the Parramatta River than currently exists via groundwater flow. The groundwater currently has exceedances of ecological criteria for some metals and untreated discharge could increase risk to ecology users of the waterways.

The water treatment plant discharges will be regulated by NSW EPA under an Environmental Protection Licence, and this will provide sufficient regulation and management of potential impacts from discharges. The migration risk is therefore considered adequately managed.

9.6.3 Migration of Vapours and Odours

There was no evidence from the combined investigations for significant sources of either soil vapour or odorous materials. Therefore the risk of creating migration of vapours or odours is considered low.

9.6.4 Mobilisation of Soil Contaminants

The soil contaminants of concern were primarily heavy metals and PAHs and a singular detection of PFAS.

Whilst mobilisation of these contaminants from soil to groundwater is possible, the majority of Site soils are covered with hard stand, thereby preventing the aqueous mobilisation of contaminants in soils. The proposed site will largely be covered in hardstand post completion there by preventing future mobilisation of contaminants. Whilst some mobilisation due to disturbance is possible, no soil contamination likely to be able to result in significant groundwater contamination was encountered.

The PFAS (PFOS only) soil detection did not exceed either the adopted human health or ecological criteria mobilisation to groundwater is not considered likely to have the potential to affect groundwater concentrations.

The creation of dust is potentially significant due to the presence of asbestos detected in fill material. Whilst remediation of identified hotspots is intended to remove limited contamination, management of potential asbestos risk will be necessary, and prudent during the construction phase of works.

9.7 Potentially Complete Source Pathway Receptor Linkages

A Source-Pathway-Receptor (SPR) linkage is considered to be present when a pathway links a source with a receptor. These linkages explain when there may be risks to the receptor, either now or in future.

The assessment of the SPR linkages for the soil and groundwater conditions at the Site is summarised in Table 9-3 below.

Table 9-3: SPR linkage assessment

Source	Pathway / Transport Mechanism	Receptor(s)	SPR linkage status
Soil Conditions	Direct Contact	Current: Sydney Metro construction workforce Future construction workers (broader site area following completion of the Metro station) General public / passers-by (dust only) Future users of development land outside the Sydney Metro land. Future users of Sydney Metro Station	Incomplete: Human health criteria (commercial/industrial) exceeded for Lead at location BUR_BH115_0.5, however the 95%UCL was below the human health screening level.
	Inhalation of vapours		Incomplete for Sydney Metro station use: no volatile soil contaminant sources were identified during the investigation.
	Inhalation of dust		Potentially complete: Bonded ACM fragments were identified in two locations (BUR_BH116_0.2 and BUR_BH123_0.3) Incomplete: Lead (BUR_BH115_0.5) in fill material beneath the two car mechanical workshops. 95% UCLs were below criteria .
	Exposure to flammable material		Incomplete: All TRH Management Limits were found to be compliant with the screening criteria.
	Direct Contact /Ingestion	Terrestrial ecological organisms	Incomplete for Sydney Metro station development. Some EIL exceedances were reported however the 95%UCL was below the ecological screening criteria. Additionally, the Site will be developed to include paved structures and built up garden beds.

Source	Pathway / Transport Mechanism	Receptor(s)	SPR linkage status
Groundwater Conditions	Direct Contact /Ingestion	Current: Sydney Metro construction workforce Future construction workers (broader site area following completion of the Metro station) Future users of the Sydney metro station and development land.	Incomplete: (current and future construction workers). Excavations at the Site may result in workers coming in contact with groundwater however no exceedances of the recreational criteria were observed. Incomplete (future Site users): Future users of either the Sydney Metro station or the development land are not considered potentially exposed to impacted groundwater because there will be no pathway for direct contact.
	Inhalation of vapours		Incomplete: contaminant data does not indicate a vapour in groundwater will present a risk.
	Direct Contact /Ingestion	Aquatic ecological organisms in Parramatta River Terrestrial flora/fauna on Site	Potentially complete for aquatic organisms: Groundwater samples exceeded the ecological screening criteria (for metals), although treatment proposed. Incomplete for terrestrial ecology: not likely to be groundwater dependent
	Direct Contact /Ingestion	Recreational users of Parramatta River	Incomplete: Recreational criteria was not exceeded based on samples collected as part of this investigation.

In summary the potentially viable SPR linkages that require remediation action (further assessment, remediation or management) comprise:

- Potential risks to Sydney Metro and future development construction and intrusive maintenance workforces and general public/passers by via inhalation of dust (potentially including asbestos fibres).

For the Sydney Metro station site including the Station Box and surface access areas, there are considered to be no potential risks to future site users or workforce, since it is understood there will be no exposed soil and no access to groundwater within the developed site. Management will be required for maintenance of the hard cover.

ERM considers that the Site can be made suitable for the Sydney Metro station use, subject to remediation of the two identified asbestos hotspots, and appropriate management and treatment of groundwater.

10. COMPLIANCE WITH THE DEED AND COA

Table 10-1: Assessment of Compliance

Clause [a]	Requirement [b]	Compliance [c]
Deed Requirements		
12.19 (a)	Except for Preliminary Works, the Tunnelling Contractor must perform and submit to the Principal's Representative and the Independent Certifier a Detailed Site Investigation prior to commencing any excavation activities	This DSI has been submitted to and reviewed by Principal's Representative and the Independent Certifier
(i)	at any Area of Contamination Concern; and	The Areas of Contamination Concern at Burwood are shown in Figure 4 and are covered by the scope of the DSI.
(ii)	to the extent otherwise required under the Planning Approvals	No additional requirement: see comment under CoA D71
12.19 (b)	Notwithstanding clause 12.19(a), the Tunnelling Contractor may also perform additional Detailed Site Investigations carried out in other areas of the Construction Site or outside the Construction Site if the Tunnelling Contractor deems it necessary to manage the risks associated with contaminated land and to appropriately plan for Remediation. Any additional Detailed Site Investigation performed in accordance with this clause 12.19(b) must also be submitted to the Principal's Representative and the Independent Certifier.	There is currently no additional DSI planned
12.19 (c)	Each Detailed Site Investigation	
(i)	must	
A	investigate areas of proposed excavation or disturbance	The whole footprint of Burwood Construction Site is covered by the DSI, and therefore all areas of potential excavation or disturbance have been adequately investigated. The planned disturbance/excavation areas are shown in Figure 5.
B	investigate land within the Construction Site or Extra Land surrounding the areas of proposed excavation or disturbance with respect to the potential migration of Contamination via groundwater, ground gas, vapour and odour into the areas of excavation or disturbance; and	The land within Burwood Construction Site has been adequately investigated with respect to potential migration via groundwater, ground gas (not likely to be present), vapour (no significant volatile substances detected, and not considered likely) and odours (no significantly odorous material encountered).
C	characterise risks to the construction, operation and maintenance of Sydney Metro West and its infrastructure from Contamination	Risks are characterised in Section 9, Conceptual Site Model.

Clause [a]	Requirement [b]	Compliance [c]
(ii)	be prepared in accordance with Law, Good Industry Practice, the Planning Approvals, all guidelines made or approved by the EPA and any other requirements of this deed;	This DSI has been prepared in accordance with this requirement.
(iii)	be reviewed and approved by a Certified Contaminated Land Consultant; and	This DSI has been reviewed and approved by a Certified Contaminated Land Consultant (Peter Lavelle, CEnvP SC).
(iv)	characterise the risk of Contamination migrating from the Construction Site as a result of the Tunnelling Contractor's Activities;	See Section 9 Conceptual Site Model.
12.19(d)	In addition to the requirements set out in clause 12.19(c), each Detailed Site Investigation performed within an Area of Contamination Concern must:	
(i)	To be reviewed and endorsed by an Accredited Site Auditor; and	This report is scheduled to be reviewed and endorsed by NSW accredited Site Auditor James Davis of Enviroview.
(ii)	Be accompanied by an Interim Site Audit Advice prepared by the Accredited Site Auditor when submitted to the Principal's Representative and the Independent Certifier in accordance with clause 12.19(a).	The Interim Site Audit Advice is in preparation and will be provided separately.
12.19 (e)	In addition to the requirements set out in clauses 12.19(c) and 12.19(d), each Detailed Site Investigation performed within a Key Contaminated Area must in accordance with the relevant EPA guidelines:	The whole Site was identified as a KCA, this report has been prepared in accordance with the relevant EPA guidelines
(i)	determine and delineate the lateral and vertical extent of Contamination within each Key Contaminated Area;	A total of 39 soil sampling locations have been advanced as part of this investigation, meeting the minimum requirements of the NSW EPA Sampling Design Guidelines (1995) for site characterisation. ACM detected at two locations outside the Station Box have been delineated to within the immediate sample locations. Remediation could be achieved at these two locations via excavation and off-site disposal. Given asbestos has not been detected in boreholes (or three test pits) across the remainder of the Site, implementing an EMP during the construction phase of works would be a prudent approach to mitigate potential risks associated with unexpected finds of asbestos.
(ii)	include in-situ classification of Solid Waste at sampling densities not less than that specified within the NEPM (2013) and the Industrial Waste	Waste classification of soils generated from the excavation of materials was conducted in a

Clause [a]	Requirement [b]	Compliance [c]
	Resources Guidelines (7), Sampling and Analysis: Soil Sampling (EPA Victoria 2010), except for Virgin Excavated Natural Material (VENM) and Excavated Natural Material (ENM) which are to be classified in accordance with the requirements of the Protection of the Environment Operations Act 1997 (NSW);	separate Waste Classification Repoert, provided in Appendix J.
(iii)	classify the Solid Waste in accordance with the Waste Classification Guidelines using a statistical approach where relevant;	
(iv)	be suitably detailed so as to inform the development of the Remediation Action Plan, any Remediation Cost Estimate and any Agreed Remediation Scope and to characterise contamination risk to the construction, operation and maintenance of Sydney Metro West (including but not limited to soil, groundwater, ground gas, vapour and odour risks arising from Contamination within the area of proposed excavation or disturbance or migrating into the area of proposed excavation or disturbance); and	The DSI report has identified the presence of potential contaminants on-site that would require the development of a Remediation Action Plan for appropriate management.
(v)	without limiting the Tunnelling Contractor's obligations under clause 12.20A(h), characterise the risk of any PFAS contained in Solid Wastes in respect of The Bays PFAS Key Contaminated Area.	Not applicable
CoA requirements		
Condition D71	Before commencement of any construction that would result in the disturbance of moderate to high risk contaminated sites as identified in the documents identified in Condition A1 of this schedule, Detailed Site Investigations (for contamination) must be conducted to determine the full nature and extent of the contamination. The Detailed Site Investigation Report(s) and the subsequent report(s), must be prepared, or reviewed and approved, by consultants certified under either the Environment Institute of Australia and New Zealand's Certified Environmental Practitioner (Site Contamination) scheme (CEnvP(SC)) or the Soil Science Australia Certified Professional Soil Scientist Contaminated Site Assessment and Management (CPSS CSAM) scheme. The Detailed Site Investigations must be undertaken in accordance with guidelines made or approved under section 105 of Contaminated Land Management Act 1997 (NSW). The Detailed Site Investigation for Sydney	The low to moderate risk areas referred to are defined by the Environmental Impact Statement for the project. There are five at Burwood Construction Site, comprising AEI 41 (Mechanical Workshop), AEI 42 (Car wash and detailing), AEI 43 (Former and existing structures), AEI 44 (Parramatta Road – vehicle particulate deposition) and AEI 45 (Historical commercial / industrial use within locality). All of which are located within the Construction Site. ERM confirms that the DSI has been prepared in accordance with the specified guidance, and has been reviewed and approved by a CEnvP (SC).

Clause [a]	Requirement [b]	Compliance [c]
	Olympic Park metro construction site must be prepared in consultation with SOPA. *Note: Nothing in this condition prevents the Proponent from preparing individual Remedial Action Plans for separate sites*	
Condition D72	Should remediation be required to make land suitable for the final intended land use, a Remedial Action Plan must be prepared, or reviewed and approved, by consultants certified under either the Environment Institute of Australia and New Zealand's Certified Environmental Practitioner (Site Contamination) scheme (CEnvP(SC)) or the Soil Science Australia Certified Professional Soil Scientist Contaminated Site Assessment and Management (CPSS CSAM) scheme. The Remedial Action Plan must be prepared in accordance with relevant guidelines made or approved by the EPA under section 105 of the Contaminated Land Management Act 1997 (NSW) and must include measures to remediate the contamination at the site to ensure the site will be suitable for the proposed use when the Remedial Action Plan is implemented. The Remedial Action Plan for Sydney Olympic Park metro construction site must be prepared in consultation with SOPA. *Note: Nothing in this condition prevents the Proponent from preparing individual Remedial Action Plans for separate sites*	Remediation in the form of management to prevent exposure to future Site users is required to make the Site suitable for use. Therefore a Remedial Action Plan is required and will be prepared as a separate report.

11. CONCLUSIONS

A total of 39 soil investigation locations were completed across the Site during this DSI; fourteen locations were completed inside the Station Box Area and 25 locations were completed outside the Station Box Area. Groundwater samples were also collected from two monitoring wells on the Site (one existing well and one new well).

Based on the intrusive investigation works completed at the Site, including previous investigations, , the following conclusions have been made relating to soil at the Site:

- The soil data set is considered to provide an appropriate level of site characterisation in accordance with the requirements of guidance made or approved under s105 of the Contaminated Land Management Act 1997.
- Fill materials on the Site were found to contain sandstone, concrete, brick and plastic. ACM fragments were found in two locations. Natural soils below the fill consisted of silty clays and clays, with shales underlying the clays.
- Soil samples exceeded human health criteria and ecological screening criteria for lead in one location (BUR_BH115_0.5). However, the 95% UCL was below criteria for lead. Additionally, three primary samples exceeded the adopted EIL for copper and three primary samples exceeded the EIL criteria for zinc. Calculation of the 95% UCL for these results indicated all were compliant with the adopted EIL criteria.
- PAHs were detected at numerous locations within fill materials across the site. Benzo(a)pyrene results were below the high reliability ecological screening criteria used (CRC Care, 2017). Carcinogenic PAHs as benzo(a)pyrene TEQ were compliant with the human health screening criteria.
- The reported concentrations of PCBs, pesticides, and PFAS concentrations in soil were below the adopted screening criteria.
- Bonded asbestos fragments were identified in two sample locations (BUR_BH116_0.2 ACM and BUR_BH123_0.3) within fill materials, however each detection was subsequently delineated in the north, south, east and westerly directions and both areas were considered to be hotspots.
- No significantly odorous soil was encountered, and odours are not considered likely to present a risk to the construction site.
- Results for VOCs, SVOCs and TRH did not exceed any of the human health or ecological screening criteria adopted. Results indicated that vapour intrusion risk was low and acceptable.

The conclusions relevant to groundwater at the site are as follows:

- The groundwater data is considered to provide adequate characterisation in accordance with the requirements of guidance made or approved under s105 of the Contaminated Land Management Act 1997.
- Concentrations of metals (one or more of arsenic, cadmium, copper, nickel and zinc) and total phosphorus and nitrogen in groundwater exceeded the adopted screening criteria in both groundwater wells sampled.
- There were no other exceedances of the adopted ecological or health screening criteria.
- A trace detection of 6:2 Fluorotelomer Sulfonate was reported in one groundwater sample (BUR_MW108) however there were no exceedances of the adopted ecological or health screening criteria reported.
- Dewatering of the Station Box is likely to result in groundwater flow changing from the inferred current flow towards the Parramatta River to a flow pattern where some of the groundwater below the Site flows towards the Station Box. This is not considered likely to result in any significant change to the overall quality of groundwater beneath the Site, or to the risk profile.

In summary the potentially viable SPR linkages that require remediation action (further assessment, remediation or management) comprise:

- Potential risks to Sydney Metro and future development construction and intrusive maintenance workforces and general public/passers by via inhalation of dust (potentially including asbestos fibres).

Fill material within the identified asbestos hotspot areas could be remediated and disposed off-site and a RAP would need to be developed. Considerations will need to be made for the sustainability of future actions during remediation planning.ERM considers that the level of site characterisation achieved by this DSI is sufficient to provide a basis for a RAP, which should be developed to target asbestos detected in fill at BUR_BH116 and BUR_BH123. Given asbestos has not been detected in boreholes (or three test pits) across the remainder of the site, implementing the processes in the Construction & Environmental Management Plan (CEMP) during the construction phase of works would be prudent in order to mitigate risks associated with unexpected finds of asbestos.

While a RAP is not required for the remainder of the Site to meet CoA D72 within the Conditions of Approval for Sydney Metro West – Concept and Stage 1 Construction (SSI 10038), soil and groundwater within the Station Box must be documented as required by the Sydney Metro West Central Tunnelling Works Design and Construction Deed (“the Deed”); this will be accomplished via a Contaminated Soil Management Plan (CSMP) for the Station Box.

The Burwood North Construction Site RAP is being prepared for the remainder of the Site for the purposes of rendering the Site suitable for use in accordance with the requirements of the Contaminated Land Management Act (1997), guidelines prepared under the Act and the ASC NEPM 1999 (NEPC 2013). Considerations will need to be made for the sustainability of future actions during remediation planning.

ERM considers that the applicable requirements of the Deed and the project CoA have been complied with.

Data Comments

#1 Quantification of linear and branched isomers has been conducted as a single total response using the relative response factor for the corresponding linear/branched standard.

Photo 020	Example of fill materials from BUR_BH115

APPENDIX B BORELOGS

BORE LOG ID BUR_BH101

Client: AFJV
Project No: 0628507
Project Name: SMW_Burwood
Site Address: Crn Parramatta Rd and Burwood Rd
Drilling Date: 21/12/2021 - 21/12/2021

Drilling Method: Augering Solid Fligh
Hole Diam./Width (mm): 125
Surface Completion: Backfill
Final Water Level (m bgl):

Elevation (Ground):
Elevation (Case):
Easting (MGA): -33.867974
Northing (MGA): 151.105915

APPENDIX D DATA QUALITY ASSESSMENT

1. QUALITY ASSURANCE AND QUALITY CONTROL

The objective of this data assessment is to evaluate the quality of data gathered during the assessment detailed in this report. This process has been undertaken to assess whether the sample data is of a suitable standard to be utilised in this report. The data assessment consists of comparing field and laboratory QA/QC results to documented NEPC, ANZECC, USEPA SW-846 guidelines, USEPA CLP National Functional Guidelines for Inorganic and Organic Data Review, and other internationally recognised publications. The data assessment has been prepared in accordance with the ASC NEPM. Particular reference is made to the PARCC parameters (precision, accuracy, representativeness, completeness and comparability) in evaluating the data quality.

Table D1 below discusses the QA/QC measures pertinent to the site investigation sampling. *Table D2* presented at the end of this annex identifies laboratory reports relevant to the investigation works.

Table D1 Field QA/QC Assessment

QA/QC Criterion	Comments
QA/QC program includes intra-laboratory duplicates and inter-laboratory duplicates samples	**Soil:** Field duplicate samples, including intra and inter laboratory duplicates were collected at a minimum ratio of one duplicate to twenty primary samples (5%). For PFAS sampling, intra and inter laboratory duplicates were collected at a minimum ratio of one duplicate to ten primary samples (10%) The Relative Percentage Difference (RPDs) of soil duplicate sample pairs were generally within the acceptance limits (30% RPD (or 50% RPD for organics) where one or both values were greater than 10 x LOR or 50% RPD where one or both values were less than 10 x LOR). RPDs for all soil duplicate pairs are presented in Table D-4. Based on the results obtained from the soil RPDs, it is considered that the dataset quality is adequate and acceptable for the purposes of the Detailed Site Investigation. The following information is noted: Of the 84 primary soil samples analysed, one intra-laboratory field duplicate sample and one inter-laboratory field duplicate sample were collected, at a rate of 9.5% for each, which was above the required frequency of 5%. Soil samples were not homogenised prior to splitting to minimise potential loss of volatile analytes. A total of 2381 soil RPDs were calculated, the majority of which were reported to be within the aforementioned criteria, with 114 soil RPD results (3.8%) reported outside of RPD limits, with 88 of those were for sample results <10 times the LOR. 98.9% of the RPD results were reported within the acceptable range, Exceedances of the soil RPD criteria were considered likely to be due to matrix heterogeneity between primary and duplicate samples collected of fill materials from the site. In all instances, soil results from both primary and duplicate samples have been used for the purpose of the investigations. As such, where duplicate RPDs for soil were reported outside of acceptable limits, the variability in concentrations between samples have been accounted for in decision-making, and are therefore not considered to affect the overall conclusions or usability of the dataset as a whole. Table D-1a presents a summary of the soil duplicate RPD results. Duplicate samples were not collected during ADE's supplementary sampling works, but as samples were for asbestos identification/quantification only this was not considered necessary due to the heterogeneous nature of asbestos in fill. **Groundwater:** Field duplicate samples were not collected from either of the two groundwater wells sampled at the Burwood site. Groundwater sampling at Burwood was completed alongside a groundwater sampling programme that included groundwater wells across the Sydney Metro West Central Package alignment.(from Sydney Olympic Park to The

QA/QC Criterion	Comments
	Bays sites). An Inter-laboratory duplicate sample (T01_220119) and an intra-laboratory duplicate sample (D01-220119) were collected from SMW_BH19 (at the Sydney Olympic Park site) on 19 January 2022 as part of this program of works. RPDs for these duplicate pairs are provided in Table D1b. The Relative Percentage Difference (RPDs) of both of these duplicate sample pairs were generally within the acceptance limits (30% RPD (or 50% RPD for organics) where one or both values were greater than 10 x LOR or 50% RPD where one or both values were less than 10 x LOR). A total of 265 groundwater RPDs were calculated, the majority of which were reported to be within the aforementioned criteria, with 4 groundwater RPD results (1.5%) reported outside of RPD limits, it is noted that all of these related to sample results <10 times the LOR. 98.5% of the RPD results were reported within the acceptable range, While the duplicate samples collected were not from the Burwood site, they were collected as part of the same sampling programme by the same field team, using the same equipment and methodology and results were analysed by the same laboratories, therefore conclusions relating to data accuracy are considered relevant for the samples collected at the Burwood site. Table D-1b presents a summary of the water duplicate RPD results.
Appropriate decontamination procedures were adopted	**Soil:** Samples were collected using a fresh pair of nitrile gloves. Soils were either collected from the push tube sleeve, hand auger, solid flight auger or from cutting from air rotary drilling. Decontamination of down hole drilling equipment prior to starting each new location was conducted, and collection of rinsate samples was conducted to evaluate the decontamination process. No detections of analytes were reported in rinsate samples, demonstrating effective decontamination was achieved. ADE followed a similar methodology. A reinstate sample was not collected by ADE as sampling was focussed on asbestos only. **Groundwater:** Groundwater sampling equipment was decontaminated using a solution of water and Liquinox between sampling locations. Dedicated bailers were used to collect PFAS samples prior to lowering the bladder pump into the well (to remove the opportunity for cross contamination and detection of PFAS at low concentrations). Remaining analytes were sampled using the decontaminated bladder pump. A rinsate sample was collected each day groundwater was sampled during the groundwater field programme. No detections were reported within rinsate samples collected on the days in which Burwoood wells were sampled (20 and 21 January 2022). Rinsate sample results are provided in Tables D2a and D2b.
All relevant media assessed	The scope involved soil and groundwater sampling. Soil samples were collected from various depths within the soil profile and were submitted for laboratory analysis. Groundwater sampling was conducted at depths representative of the Sites groundwater and as part of a larger groundwater monitoring program across multiple Sydney Metro Station sites.
Appropriateness of Sampling Strategy	**Soil:** Investigation locations were chosen to provide adequate coverage of the Site and assess potential sources of contamination. Additionally to provide waste classification data for materials within the Station Box. A sampling strategy was designed based on the conceptual site model and is considered appropriate to meet the project objectives.

QA/QC Criterion	Comments
	ADE's supplementary sampling works were to allow for delineation of hotspots, and provide increased sample density to allow decisions to be made with regard to the extent asbestos in fill at the site. **Groundwater:** Three of the locations proposed to be sampled as part of the groundwater investigation were not able to be sampled due to being destroyed, inaccessible or dry. While data from two wells is not sufficient for establishing groundwater flow direction and gradient, the samples provided characterisation of the groundwater quality at the site.
Trip Blank and Trip Spikes Collected	**Soil:** A total of three laboratory-prepared soil trip blank samples were prepared, stored and transported with soil samples. Summary tables of results for soil trip blanks are presented in Table D-3a. The concentrations of COPCs (BTEX) in soil trip blanks were reported below the laboratory LOR for all samples analysed, indicating a low likelihood of cross-contamination having occurred during transport and storage of samples. A total of three laboratory prepared soil trip spike (TS) samples were analysed as part of the investigation. Trip spike recovery percentages reported by the laboratory are presented in Table D-4a. Trip spikes submitted with soil batches were all reported within the acceptable recovery range (70-130%) with the exception of one Trip spike reporting a recovery of Benzene of 67%. As all samples reported no detections of Benzene and were consistent across multiple sampling events, this result is not considered to be significant and indicates a low likelihood of volatile loss having occurred during transport and storage of samples. Trip blanks and spikes were not required during the asbestos investigation conducted by ADE as soils were not being tested for volatile contaminants. **Groundwater:** Laboratory-prepared water trip blank samples were prepared, stored and transported with samples during the groundwater analytical programme. A trip blank sample was included in each batch of samples to the laboratory and the trip blank samples within laboratory batches ES2202047 and ES2201979 are relevant to the groundwater samples collected from the Burwood site. Summary tables of results for water trip blanks are presented in Table D-3b. The concentrations of COPCs (BTEX) in water trip blanks were reported below the laboratory LOR for all samples analysed, indicating a low likelihood of cross-contamination having occurred during transport and storage of samples. A total of two laboratory prepared trip spike (TS) samples were analysed as part of the investigation. Trip spike recovery percentages reported by the laboratory are presented in Table D-4b. Recoveries of spiked compounds in the trip spike sample in batch ES2202047 were all reported within the acceptable recovery range (70-130%). This indicates a low likelihood of volatile loss having occurred during transport and storage of samples. The trip spike sample within batch ES2202047 contained no detectable BTEX or naphthalene. The absence of any concentrations indicates this is a mislabelled trip blank sample. This has been confirmed by the laboratory (email correspondence provided at the end of this section).

QA/QC Criterion	Comments
Sample Collection, handling, and transportation procedures	**Soil:** Borelogs describing the media sampled, sampling locations, observations of potential contamination (e.g. odour) and field QA/QC samples were completed. Soil encountered was also photographed. (refer to *Appendices A and B).* Soil samples were placed in laboratory supplied sample jars, stored in a chilled cooler on ice, and forwarded to the NATA-accredited laboratory under COC conditions. **Groundwater:** Groundwater samples were collected following 'low-flow' purging of the water in the monitoring well and stabilisation of field parameters. Water was pumped directly into the laboratory supplied sample containers. And placed in an insulated cooler on ice prior to transportation to the NATA-accredited laboratory under COC conditions The methods used to collect the samples, the types of sample containers, preservation techniques and custody protocols were generally documented appropriately. Attempts to chill were recorded as present by the laboratory upon sample receipt.
Sampling is representative of the site conditions	**Soil:** The number and type of samples collected were considered to be appropriate and in accordance with the NSW EPA Sampling Design Guidelines (1995) with minimum sampling density requirement for the site having been achieved. Limitations related to characterisation of asbestos in fill using soil bores are acknowledged. The supplementary sampling works conducted by ADE involved test pits and asbestos quantification sampling where possible (3 locations), however access continued to be constrain in most parts of the site and boreholes were required for the remainder of the locations. **Groundwater:** The two groundwater samples collected from wells at the site provide representative information on the groundwater quality at the site. Groundwater flow direction and gradient were not able to be established, but characterisation of groundwater to enable decisions to be made regarding site suitability was achieved, meeting the DSI objective.
Other field QA/QC	**Soil and groundwater:** Field instruments used as part of the investigation were appropriately calibrated and used according to the manufacturer's instructions. Calibration records are included in Appendix C.

Table D2 below summarises the laboratory's QA/QC measures pertinent to the analytical program.

Table D2 Laboratory QA/QC Assessment

QA/QC criterion	Comments
Appropriate methodologies used for sample analyses	The laboratories used for the investigation works were NATA accredited ALS (NATA Registration No. 825) and Eurofins (NATA Registration No. 1261). All laboratory reports were NATA stamped and signed by a NATA signatory. All methodologies were considered appropriate for the identified contaminants of concern in the matrix.
Appropriate Limit of Reporting	The laboratory LOR for each analyte is presented in the laboratory reports and summary tables. LORs were appropriate to allow screening of results against the nominated criteria.
Laboratory QA/QC Plan	Copies of signed chain of custody forms were returned by the laboratory. The primary and secondary laboratories were NATA accredited. It is noted that all analytical methods completed were NATA approved as documented on the laboratory reports. Laboratory reports indicate results not covered by NATA accreditation which were limited to calculations of totals (e.g. total BTEX, total PAH). Laboratory quality control samples included laboratory control samples, internal duplicates, matrix spikes and method blanks. The types of QA/QC samples analysed by the laboratory for the documented samples were considered sufficient to assess the precision and accuracy of the laboratory methods used. The statistical data presented in the laboratory QA/QC reports were considered adequate in demonstrating the precision and accuracy of the methods used to analyse field samples. Laboratory duplicate RPDs, surrogate recoveries, matrix spike recoveries and laboratory control samples were generally within the acceptable ranges although there were some exceptions as noted in the laboratory reports. The noted exceptions were considered minor and ERM considers the laboratory data is of acceptable quality for the purposes of this s DSI.

Table D3 summarises the QA/QC results in relation to the data quality indicators of precision, accuracy, representativeness, comparability and completeness for the investigation sampling program.

Table D3 Overall Sampling and Analysis Methodology Assessment

Field Considerations	Laboratory Considerations
Precision Requirements	
The soil and groundwater sampling was conducted following ERM's SOPs and any variations from these procedures were documented.	Analysis of the following were reported: ■ Laboratory duplicates; and ■ Field intra- and inter- laboratory duplicates;
Precision Comments	
No significant variations from ERM's SOPs were noted. Field and laboratory duplicates were generally reported within the acceptance limits. Minor exceedances were noted, as presented in *Tables D-1a,* and indicate heterogeneous soil samples.	

Accuracy Requirements	
The soil sampling was conducted following ERM's SOPs and any variations from these procedures were documented.	Analysis of the following were reported: ■ Trip blanks; ■ Method blanks; ■ Matrix spikes; ■ Surrogate spikes; and ■ Laboratory control samples.

Accuracy Comments

Decontamination of the down hole drilling equipment was conducted prior to drilling at each location. Groundwater sampling equipment was also decontaminated between each location. Rinsate samples were collected and considered acceptable for the purposes of this investigation with no non-conformances reported. Indicating decontamination procedures were adequate.

No significant variations from ERM SOPs were noted. Laboratory QA/QC samples were generally reported within the acceptance limits specified in the laboratory reports.

Representativeness Requirements	
Appropriate media were identified and sampled.	Samples were analysed according to the Sampling and Analysis Plan.

Representativeness Comments

The number and type of samples collected as part of investigation works was considered to be representative of the Site The number and locations of boreholes was generally in accordance with the SAQP. ERM considers that sufficient data is available to establish a representative dataset across the site for the purposes of the investigation. While access constraints limited test pitting in many areas of the site, the additional sampling for asbestos containing material and asbestos fines conducted by ADE provided greater spread of characterisation of fill.

Comparability Requirements	
■ SOPs were used. ■ All sampling was conducted by an appropriately qualified and experienced sampler. ■ Impacts of climatic conditions on sample integrity were minimised by storing samples in a chilled cooler (with the exception of soil vapour samples). ■ The types of samples collected were consistent.	■ Analytical methods suitable for the target media were used. ■ The laboratory LORs used to report analyte concentrations were less than the adopted investigation criteria. ■ Results of laboratory analysis comparable with field screening results where applicable (field observations, PID screening).

Comparability Comments

The laboratory LOR for each analyte is presented in the laboratory reports and summary tables.

Completeness Requirements

- Relevant locations were sampled.
- The sampling program was conducted following ERM's SOPs and any variations from these procedures were documented.
- All sampling was conducted by an appropriately qualified and experienced sampler.
- Documentation of field works was provided (refer Appendices A, B and C).
- All critical samples were analysed.
- All analytes were analysed according to the Sampling and Analysis Plan.
- Appropriate analysis methods and laboratory LORs were used in the majority of cases.
- Sample documentation was provided.
- Sample holding times were generally complied with.

Completeness Comments

The number and type of samples collected were considered to be representative of the Site. Evaluation of soil for asbestos in fill was only able to be done to a limited degree due to boreholes being used to collect samples and inspect soil.

*RPDs have only been considered where a concentration is greater than 1 times the EQL.
**High RPDs are in bold (Acceptable RPDs for each EQL multiplier range are: 50 (1-10 x EQL); 30 (10-30 x EQL); 30 (> 30 x EQL))
***Interlab Duplicates are matched on a per compound basis as methods vary between laboratories. Any methods in the row header relate to those used in the primary laboratory

Sample Receipt Advice

Company name:	ERM Sydney
Contact name:	Jessica Lawrence
Project name:	BURWOOD
Project ID:	0577577
Turnaround time:	5 Day
Date/Time received	Dec 20, 2021 4:46 PM
Eurofins reference	852763

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
✓	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
X	Split sample sent to requested external lab.
X	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

John Nguyen on phone : or by email: JohnNguyen@eurofins.com

Results will be delivered electronically via email to Jessica Lawrence - jessica.lawrence@erm.com.

Note: A copy of these results will also be delivered to the general ERM Sydney email address.

Sum (PFHxS + PFOS)*	5	ug/kg	8.2
Sum of US EPA PFAS (PFOS + PFOA)*	5	ug/kg	8.2
Sum of enHealth PFAS (PFHxS + PFOS + PFOA)*	5	ug/kg	8.2
Sum of WA DWER PFAS (n=10)*	10	ug/kg	< 10
Sum of PFASs (n=30)*	50	ug/kg	< 50

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Description	Testing Site	Extracted	Holding Time
Total Recoverable Hydrocarbons - 1999 NEPM Fractions	Sydney	Dec 23, 2021	14 Days
- Method: LTM-ORG-2010 TRH C6-C40			
Total Recoverable Hydrocarbons - 2013 NEPM Fractions	Sydney	Dec 23, 2021	14 Days

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013 and are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil/sediment/solid results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. Information identified on this report with blue colour, indicates data provided by customer that may have an impact on the results.
9. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

Units

mg/kg: milligrams per kilogram
mg/L: milligrams per litre
µg/L: micrograms per litre
ppm: parts per million
ppb: parts per billion
%: Percentage
org/100mL: Organisms per 100 millilitres
NTU: Nephelometric Turbidity Units
MPN/100mL: Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
QSM	US Department of Defense Quality Systems Manual Version 5.4
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should be used as a guide only and may be different when site specific Sampling Analysis and Quality Plan (SAQP) have been implemented

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR: No Limit

Results between 10-20 times the LOR: RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.4 where no positive PFAS results have been reported have been reviewed and no data was affected.

.

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Quality Control Results

Test	Units	Result 1			Acceptance Limits	Pass Limits	Qualifying Code

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
G01	The LORs have been raised due to matrix interference
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N07	Please note:- These two PAH isomers closely co-elute using the most contemporary analytical methods and both the reported concentration (and the TEQ) apply specifically to the total of the two co-eluting PAHs
N09	Quantification of linear and branched isomers has been conducted as a single total response using the relative response factor for the corresponding linear/branched standard.
N11	Isotope dilution is used for calibration of each native compound for which an exact labelled analogue is available (Isotope Dilution Quantitation). The isotopically labelled analogues allow identification and recovery correction of the concentration of the associated native PFAS compounds.
N15	Where the native PFAS compound does not have labelled analogue then the quantification is made using the Extracted Internal Standard Analyte with the closest retention time to the analyte and no recovery correction has been made (Internal Standard Quantitation).
Q15	The RPD reported passes Eurofins Environment Testing's QC - Acceptance Criteria as defined in the Internal Quality Control Review and Glossary page of this report.

Sample Receipt Advice

Company name:	ERM Sydney
Contact name:	Jessica Lawrence
Project name:	0577577-BURWOOD
Project ID:	Not provided
Turnaround time:	10 Day
Date/Time received	Dec 22, 2021 9:18 AM
Eurofins reference	853149

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✓	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
✓	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
X	Split sample sent to requested external lab.
X	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

John Nguyen on phone : or by email: JohnNguyen@eurofins.com

Results will be delivered electronically via email to Jessica Lawrence - jessica.lawrence@erm.com.

Note: A copy of these results will also be delivered to the general ERM Sydney email address.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013 and are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil/sediment/solid results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. Information identified on this report with blue colour, indicates data provided by customer that may have an impact on the results.
9. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

Units

mg/kg: milligrams per kilogram
mg/L: milligrams per litre
µg/L: micrograms per litre
ppm: parts per million
ppb: parts per billion
%: Percentage
org/100mL: Organisms per 100 millilitres
NTU: Nephelometric Turbidity Units
MPN/100mL: Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
QSM	US Department of Defense Quality Systems Manual Version 5.4
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should be used as a guide only and may be different when site specific Sampling Analysis and Quality Plan (SAQP) have been implemented

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR: No Limit

Results between 10-20 times the LOR: RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.4 where no positive PFAS results have been reported have been reviewed and no data was affected.

.

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Quality Control Results

Test	Units	Result 1			Acceptance Limits	Pass Limits	Qualifying Code
Method Blank							
Total Recoverable Hydrocarbons							
TRH C6-C9	mg/kg	< 20			20	Pass

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N07	Please note:- These two PAH isomers closely co-elute using the most contemporary analytical methods and both the reported concentration (and the TEQ) apply specifically to the total of the two co-eluting PAHs
N11	Isotope dilution is used for calibration of each native compound for which an exact labelled analogue is available (Isotope Dilution Quantitation). The isotopically labelled analogues allow identification and recovery correction of the concentration of the associated native PFAS compounds.
N15	Where the native PFAS compound does not have labelled analogue then the quantification is made using the Extracted Internal Standard Analyte with the closest retention time to the analyte and no recovery correction has been made (Internal Standard Quantitation).
Q15	The RPD reported passes Eurofins Environment Testing's QC - Acceptance Criteria as defined in the Internal Quality Control Review and Glossary page of this report.

Sample Receipt Advice

Company name:	ERM Sydney
Contact name:	Jessica Lawrence
Project name:	0577577-BURWOOD
Project ID:	577577
Turnaround time:	5 Day
Date/Time received	Dec 23, 2021 3:44 PM
Eurofins reference	853323

Sample Information

✓	A detailed list of analytes logged into our LIMS, is included in the attached summary table.
✗	All samples have been received as described on the above COC.
✓	COC has been completed correctly.
✓	Attempt to chill was evident.
✓	Appropriately preserved sample containers have been used.
✓	All samples were received in good condition.
✓	Samples have been provided with adequate time to commence analysis in accordance with the relevant holding times.
✓	Appropriate sample containers have been used.
✓	Sample containers for volatile analysis received with zero headspace.
✗	Split sample sent to requested external lab.
✗	Some samples have been subcontracted.
N/A	Custody Seals intact (if used).

Notes

There is only one container provided for sample T08-20211221. As there is no Jar container and subsampling is not possible from The plastic container, tests: Suite 7, suit 15, ASB and VOC were cancelled for this sample. However, there is an extra Jar container for sample T07-20211221. Please advise on these.

Contact

If you have any questions with respect to these samples, please contact your Analytical Services Manager:

John Nguyen on phone : or by email: JohnNguyen@eurofins.com

Results will be delivered electronically via email to Jessica Lawrence - jessica.lawrence@erm.com.

Note: A copy of these results will also be delivered to the general ERM Sydney email address.

Sample History

Where samples are submitted/analysed over several days, the last date of extraction is reported.

If the date and time of sampling are not provided, the Laboratory will not be responsible for compromised results should testing be performed outside the recommended holding time.

Internal Quality Control Review and Glossary

General

1. Laboratory QC results for Method Blanks, Duplicates, Matrix Spikes, and Laboratory Control Samples follows guidelines delineated in the National Environment Protection (Assessment of Site Contamination) Measure 1999, as amended May 2013 and are included in this QC report where applicable. Additional QC data may be available on request.
2. All soil/sediment/solid results are reported on a dry basis, unless otherwise stated.
3. All biota/food results are reported on a wet weight basis on the edible portion, unless otherwise stated.
4. Actual LORs are matrix dependant. Quoted LORs may be raised where sample extracts are diluted due to interferences.
5. Results are uncorrected for matrix spikes or surrogate recoveries except for PFAS compounds.
6. SVOC analysis on waters are performed on homogenised, unfiltered samples, unless noted otherwise.
7. Samples were analysed on an 'as received' basis.
8. Information identified on this report with blue colour, indicates data provided by customer that may have an impact on the results.
9. This report replaces any interim results previously issued.

Holding Times

Please refer to 'Sample Preservation and Container Guide' for holding times (QS3001).

For samples received on the last day of holding time, notification of testing requirements should have been received at least 6 hours prior to sample receipt deadlines as stated on the SRA.

If the Laboratory did not receive the information in the required timeframe, and regardless of any other integrity issues, suitably qualified results may still be reported.

Holding times apply from the date of sampling, therefore compliance to these may be outside the laboratory's control.

For VOCs containing vinyl chloride, styrene and 2-chloroethyl vinyl ether the holding time is 7 days however for all other VOCs such as BTEX or C6-10 TRH then the holding time is 14 days.

Units

mg/kg: milligrams per kilogram
mg/L: milligrams per litre
µg/L: micrograms per litre
ppm: parts per million
ppb: parts per billion
%: Percentage
org/100mL: Organisms per 100 millilitres
NTU: Nephelometric Turbidity Units
MPN/100mL: Most Probable Number of organisms per 100 millilitres

Terms

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery.
CRM	Certified Reference Material - reported as percent recovery.
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands and in the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
USEPA	United States Environmental Protection Agency
APHA	American Public Health Association
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice
QSM	US Department of Defense Quality Systems Manual Version 5.4
CP	Client Parent - QC was performed on samples pertaining to this report
NCP	Non-Client Parent - QC performed on samples not pertaining to this report, QC is representative of the sequence or batch that client samples were analysed within.
TEQ	Toxic Equivalency Quotient
WA DWER	Sum of PFBA, PFPeA, PFHxA, PFHpA, PFOA, PFBS, PFHxS, PFOS, 6:2 FTSA, 8:2 FTSA

QC - Acceptance Criteria

The acceptance criteria should be used as a guide only and may be different when site specific Sampling Analysis and Quality Plan (SAQP) have been implemented

RPD Duplicates: Global RPD Duplicates Acceptance Criteria is 30% however the following acceptance guidelines are equally applicable:

Results <10 times the LOR: No Limit

Results between 10-20 times the LOR: RPD must lie between 0-50%

Results >20 times the LOR : RPD must lie between 0-30%

NOTE: pH duplicates are reported as a range not as RPD

Surrogate Recoveries: Recoveries must lie between 20-130% for Speciated Phenols & 50-150% for PFAS

PFAS field samples that contain surrogate recoveries in excess of the QC limit designated in QSM 5.4 where no positive PFAS results have been reported have been reviewed and no data was affected.

.

QC Data General Comments

1. Where a result is reported as a less than (<), higher than the nominated LOR, this is due to either matrix interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. pH and Free Chlorine analysed in the laboratory - Analysis on this test must begin within 30 minutes of sampling. Therefore, laboratory analysis is unlikely to be completed within holding time.Analysis will begin as soon as possible after sample receipt.
4. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of recovery the term "INT" appears against that analyte.
5. For Matrix Spikes and LCS results a dash "-" in the report means that the specific analyte was not added to the QC sample.
6. Duplicate RPDs are calculated from raw analytical data thus it is possible to have two sets of data.

Quality Control Results

Comments

Sample Integrity

Custody Seals Intact (if used)	N/A
Attempt to Chill was evident	Yes
Sample correctly preserved	Yes
Appropriate sample containers have been used	Yes
Sample containers for volatile analysis received with minimal headspace	Yes
Samples received within HoldingTime	Yes
Some samples have been subcontracted	No

Qualifier Codes/Comments

Code	Description
G01	The LORs have been raised due to matrix interference
N01	F2 is determined by arithmetically subtracting the "naphthalene" value from the ">C10-C16" value. The naphthalene value used in this calculation is obtained from volatiles (Purge & Trap analysis).
N02	Where we have reported both volatile (P&T GCMS) and semivolatile (GCMS) naphthalene data, results may not be identical. Provided correct sample handling protocols have been followed, any observed differences in results are likely to be due to procedural differences within each methodology. Results determined by both techniques have passed all QAQC acceptance criteria, and are entirely technically valid.
N04	F1 is determined by arithmetically subtracting the "Total BTEX" value from the "C6-C10" value. The "Total BTEX" value is obtained by summing the concentrations of BTEX analytes. The "C6-C10" value is obtained by quantitating against a standard of mixed aromatic/aliphatic analytes.
N07	Please note:- These two PAH isomers closely co-elute using the most contemporary analytical methods and both the reported concentration (and the TEQ) apply specifically to the total of the two co-eluting PAHs
N11	Isotope dilution is used for calibration of each native compound for which an exact labelled analogue is available (Isotope Dilution Quantitation). The isotopically labelled analogues allow identification and recovery correction of the concentration of the associated native PFAS compounds.
N15	Where the native PFAS compound does not have labelled analogue then the quantification is made using the Extracted Internal Standard Analyte with the closest retention time to the analyte and no recovery correction has been made (Internal Standard Quantitation).

In no case shall Eurofins be liable for consequential damages including, but not limited to, lost profits, damages for failure to meet deadlines and lost production arising from this report. This document shall not be reproduced except in full and relates only to the items tested. Unless indicated otherwise, the tests were performed on the samples as received.

Hi Team,

Please see highlighted notes below re this batch.

- Sample Trip Blank (ES2146476-034) and Trip Spike (ES2146476-035) not received – these were mistakenly added onto the CoC, please disregard these samples.
- Extra PFAS jar received with no ID (ES2146476-038) – were there any samples missing a PFAS containers?
- Extra Asbestos bag received – BUR_BH118_0.1 (ES2146476-039) – This bag should be relabelled BUR_BH118_0.25 (ES2146476-025). Please log Asbestos analysis as per the CoC.

Kind Regards,

Sep Mahamad

CAUTION: This email originated from outside of ALS. Do not click links or open attachments unless you recognize the sender and are sure content is relevant to you.

Thanks Sep,

Extra Trip Spike and Trip Blank was a mistake on the COC as there was already one sent and received in this batch of samples (Lab ID 6 and 7)

Sample BUR_BH118_0.1 should be relabelled to BUR_BH118_0.25

For the extra PFAS jar received, was there any samples from the COC where a PFAS Jar was not received even if PFAS analysis was not requested.

Kind Regards

Tristan Rodrigues

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP075 (SIM): Where reported, Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero.
- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP080: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP068: Where reported, Total Chlordane (sum) is the sum of the reported concentrations of cis-Chlordane and trans-Chlordane at or above the LOR.
- EP068: Where reported, Total OCP is the sum of the reported concentrations of all Organochlorine Pesticides at or above LOR.
- EP074: Where reported, Total Trihalomethanes is the sum of the reported concentrations of all Trihalomethanes at or above the LOR.
- EP074: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP074: Where reported, Sum of chlorinated hydrocarbons includes carbon tetrachloride, chlorobenzene, chloroform, 1,2-dichlorobenzene, 1,4-dichlorobenzene, 1,2-dichloroethane, 1,1-dichloroethene, cis-1,2-dichlorothene, trans-1,2-dichlorothene, 1,1,1,2-tetrachloroethane, 1,1,2,2-tetrachloroethane, 1,2,4-trichlorobenzene, 1,1,1-trichloroethane, 1,1,2-trichloroethane, trichloroethene, vinyl chloride, hexachlorobutadiene and methylene chloride.
- EP074: Where reported, Total Trimethylbenzenes is the sum of the reported concentrations of 1.2.3-Trimethylbenzene, 1.2.4-Trimethylbenzene and 1.3.5-Trimethylbenzene at or above the LOR.
- EP075(SIM): Where reported, Total Cresol is the sum of the reported concentrations of 2-Methylphenol and 3- & 4-Methylphenol at or above the LOR.
- EG035: Positive Mercury result ES2146476 #12 has been confirmed by reanalysis.
- EP080: The trip spike and its control have been analysed for volatile TPH and BTEXN only. The trip spike and control were prepared in the lab using reagent grade sand spiked with petrol. The spike was dispatched from the lab and the control retained.
- Amendment (02/02/22):This report has been amended to changed LOR for PFAS analysis to 5ug/kg.
- EA200 'Am' Amosite (brown asbestos)
- EA200 'Cr' Crocidolite (blue asbestos)
- EA200 'Trace' - Asbestos fibres ("Free Fibres") detected by trace analysis per AS4964. The result can be interpreted that the sample contains detectable 'respirable' asbestos fibres
- EA200: Asbestos Identification Samples were analysed by Polarised Light Microscopy including dispersion staining.

- EA200 Legend
- EA200 'Ch' Chrysotile (white asbestos)
- EA200: 'UMF' Unknown Mineral Fibres. "-" indicates fibres detected may or may not be asbestos fibres. Confirmation by alternative techniques is recommended.
- EA200: For samples larger than 30g, the <2mm fraction may be sub-sampled prior to trace analysis as outlined in ISO23909:2008(E) Sect 6.3.2-2
- EA200: 'Yes' - Asbestos detected by polarised light microscopy including dispersion staining.
- EA200: 'No*' - No asbestos found, at the reporting limit of 0.1g/kg, by polarised light microscopy including dispersion staining. Asbestos material was detected and positively identified at concentrations estimated to be below 0.1g/kg.
- EA200: 'No' - No asbestos found at the reporting limit 0.1g/kg, by polarised light microscopy including dispersion staining.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Site	: ----		
Quote number	: EN/114		
No. of samples received	: 37		
No. of samples analysed	: 21		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alana Smylie	Asbestos Identifier	Newcastle - Asbestos, Mayfield West, NSW
Edwandy Fadjar	Organic Coordinator	Sydney Organics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Inorganics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Organics, Smithfield, NSW
Ivan Taylor	Analyst	Sydney Inorganics, Smithfield, NSW
Wisam Marassa	Inorganics Coordinator	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **SOIL**

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **ES2146476**	Page	: 1 of 18
Amendment	: **1**		
Client	: **ENVIRONMENTAL RESOURCES MANAGEMENT (ERM)**	Laboratory	: Environmental Division Sydney
Contact	: MS JESSICA LAWRENCE	Telephone	: +61-2-8784 8555
Project	: 0577577-Burwood	Date Samples Received	: 17-Dec-2021
Site	: ----	Issue Date	: 02-Feb-2022
Sampler	: MADUSHANI BOLONGHE, TRISTAN RODRIGUES	No. of samples received	: 37
Order number	: ----	No. of samples analysed	: 21

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **Surrogate recovery outliers exist for all regular sample matrices - please see following pages for full details.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Regular Sample Surrogates

Sub-Matrix: **SOIL**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Samples Submitted							
EP080S: TPH(V)/BTEX Surrogates	ES2146476-020	BUR_BH104_1.0	**1.2-Dichloroethane-D4**	17060-07-0	72.3 %	72.8-133 %	**Recovery less than lower data quality objective**
EP080S: TPH(V)/BTEX Surrogates	ES2146476-016	BUR_BH103_3.0	**4-Bromofluorobenzene**	460-00-4	131 %	71.6-130 %	**Recovery greater than upper data quality objective**

Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type / Method	Count QC	Count Regular	Rate (%) Actual	Rate (%) Expected	Quality Control Specification
Laboratory Duplicates (DUP)					
PAH/Phenols (GC/MS - SIM)	0	7	0.00	10.00	NEPM 2013 B3 & ALS QC Standard
Pesticides by GCMS	0	3	0.00	10.00	NEPM 2013 B3 & ALS QC Standard
Polychlorinated Biphenyls (PCB)	0	3	0.00	10.00	NEPM 2013 B3 & ALS QC Standard
TRH - Semivolatile Fraction	0	9	0.00	10.00	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)					
PAH/Phenols (GC/MS - SIM)	0	7	0.00	5.00	NEPM 2013 B3 & ALS QC Standard
Pesticides by GCMS	0	3	0.00	5.00	NEPM 2013 B3 & ALS QC Standard
Polychlorinated Biphenyls (PCB)	0	3	0.00	5.00	NEPM 2013 B3 & ALS QC Standard
TRH - Semivolatile Fraction	0	9	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Method / *Container / Client Sample ID(s)*	*Sample Date*	*Extraction / Preparation*			*Analysis*		
		Date extracted	*Due for extraction*	*Evaluation*	*Date analysed*	*Due for analysis*	*Evaluation*

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification
Analytical Methods	*Method*	*QC*	*Regular*	***Actual***	***Expected***	*Evaluation*

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Asbestos Identification in Soils	EA200	SOIL	AS 4964 Method for the qualitative identification of asbestos in bulk samples Analysis by Polarised Light Microscopy including dispersion staining
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM Schedule B(3)
Total Mercury by FIMS	EG035T	SOIL	In house: Referenced to APHA 3112 Hg - B (Flow-injection (SnCl2) (Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM Schedule B(3)
Polychlorinated Biphenyls (PCB)	EP066	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3).
Pesticides by GCMS	EP068	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM Schedule B(3).
TRH - Semivolatile Fraction	EP071	SOIL	In house: Referenced to USEPA SW 846 - 8015 Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40. Compliant with NEPM Schedule B(3).
Volatile Organic Compounds	EP074	SOIL	In house: Referenced to USEPA SW 846 - 8260 Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3).
PAH/Phenols (SIM)	EP075(SIM)	SOIL	In house: Referenced to USEPA SW 846 - 8270. Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)
TRH Volatiles/BTEX	EP080	SOIL	In house: Referenced to USEPA SW 846 - 8260. Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. Compliant with NEPM Schedule B(3) amended.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Analytical Methods	Method	Matrix	Method Descriptions
Total Metals by ICP-MS - Suite A	EG020A-T	WATER	In house: Referenced to APHA 3125; USEPA SW846 - 6020, ALS QWI-EN/EG020. The ICPMS technique utilizes a highly efficient argon plasma to ionize selected elements. Ions are then passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to their measurement by a discrete dynode ion detector.
Total Mercury by FIMS	EG035T	WATER	In house: Referenced to APHA 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. A bromate/bromide reagent is used to oxidise any organic mercury compounds in the unfiltered sample. The ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM Schedule B(3).
Polychlorinated Biphenyls (PCB)	EP066	WATER	In house: Referenced to USEPA SW 846 - 8270 Sample extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)
Pesticides by GCMS	EP068	WATER	In house: Referenced to USEPA SW 846 - 8270 Sample extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)
TRH - Semivolatile Fraction	EP071	WATER	In house: Referenced to USEPA SW 846 - 8015 The sample extract is analysed by Capillary GC/FID and quantification is by comparison against an established 5 point calibration curve of n-Alkane standards. This method is compliant with the QC requirements of NEPM Schedule B(3)
Volatile Organic Compounds	EP074	WATER	In house: Referenced to USEPA SW 846 - 8260 Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)
PAH/Phenols (GC/MS - SIM)	EP075(SIM)	WATER	In house: Referenced to USEPA SW 846 - 8270 Sample extracts are analysed by Capillary GC/MS in SIM Mode and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)
TRH Volatiles/BTEX	EP080	WATER	In house: Referenced to USEPA SW 846 - 8260 Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. Alternatively, a sample is equilibrated in a headspace vial and a portion of the headspace determined by GCMS analysis. This method is compliant with the QC requirements of NEPM Schedule B(3)
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM Schedule B(3).

Preparation Methods	Method	Matrix	Method Descriptions
Methanolic Extraction of Soils for Purge and Trap	ORG16	SOIL	In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids	ORG17	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.
QuECheRS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.
Digestion for Total Recoverable Metals	EN25	WATER	In house: Referenced to USEPA SW846-3005. Method 3005 is a Nitric/Hydrochloric acid digestion procedure used to prepare surface and ground water samples for analysis by ICPAES or ICPMS. This method is compliant with NEPM Schedule B(3)
Separatory Funnel Extraction of Liquids	ORG14	WATER	In house: Referenced to USEPA SW 846 - 3510 100 mL to 1L of sample is transferred to a separatory funnel and serially extracted three times using DCM for each extract. The resultant extracts are combined, dehydrated and concentrated for analysis. This method is compliant with NEPM Schedule B(3) . ALS default excludes sediment which may be resident in the container.
Volatiles Water Preparation	ORG16-W	WATER	A 5 mL aliquot or 5 mL of a diluted sample is added to a 40 mL VOC vial for purging.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Descriptive Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alex Rossi	Organic Chemist	Sydney Organics, Smithfield, NSW
Brendan Schrader	Laboratory Technician	Newcastle - Asbestos, Mayfield West, NSW
Franco Lentini	LCMS Coordinator	Sydney Inorganics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Organics, Smithfield, NSW
Wisam Marassa	Inorganics Coordinator	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP080: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP068: Where reported, Total Chlordane (sum) is the sum of the reported concentrations of cis-Chlordane and trans-Chlordane at or above the LOR.
- EP068: Where reported, Total OCP is the sum of the reported concentrations of all Organochlorine Pesticides at or above LOR.
- EP074: Where reported, Total Trihalomethanes is the sum of the reported concentrations of all Trihalomethanes at or above the LOR.
- EP074: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP074: Where reported, Sum of chlorinated hydrocarbons includes carbon tetrachloride, chlorobenzene, chloroform, 1,2-dichlorobenzene, 1,4-dichlorobenzene, 1,2-dichloroethane, 1,1-dichloroethene, cis-1,2-dichlorothene, trans-1,2-dichlorothene, 1,1,1,2-tetrachloroethane, 1,1,2,2-tetrachloroethane, 1,2,4-trichlorobenzene, 1,1,1-trichloroethane, 1,1,2-trichloroethane, trichloroethene, vinyl chloride, hexachlorobutadiene and methylene chloride.
- EP074: Where reported, Total Trimethylbenzenes is the sum of the reported concentrations of 1.2.3-Trimethylbenzene, 1.2.4-Trimethylbenzene and 1.3.5-Trimethylbenzene at or above the LOR.
- EP075(SIM): Where reported, Total Cresol is the sum of the reported concentrations of 2-Methylphenol and 3- & 4-Methylphenol at or above the LOR.
- EP080: Positive results for sample ES2146625-009 was confirmed by re-analysis.
- EG035: Positive Mercury result ES2146625 #5 has been confirmed by reanalysis.
- EP080: The trip spike and its control have been analysed for volatile TPH and BTEXN only. The trip spike and control were prepared in the lab using reagent grade sand spiked with petrol. The spike was dispatched from the lab and the control retained.
- Amendment (02/02/2022):This report has been amended to changed LOR for PFAS analysis to 5ug/kg.
- EA200 'Am' Amosite (brown asbestos)
- EA200 'Cr' Crocidolite (blue asbestos)
- EA200 'Trace' - Asbestos fibres ("Free Fibres") detected by trace analysis per AS4964. The result can be interpreted that the sample contains detectable 'respirable' asbestos fibres
- EA200: Asbestos Identification Samples were analysed by Polarised Light Microscopy including dispersion staining.
- EA200 Legend
- EA200 'Ch' Chrysotile (white asbestos)

- EA200: 'UMF' Unknown Mineral Fibres. "-" indicates fibres detected may or may not be asbestos fibres. Confirmation by alternative techniques is recommended.
- EA200: For samples larger than 30g, the <2mm fraction may be sub-sampled prior to trace analysis as outlined in ISO23909:2008(E) Sect 6.3.2-2
- EA200: 'Yes' - Asbestos detected by polarised light microscopy including dispersion staining.
- EA200: 'No*' - No asbestos found, at the reporting limit of 0.1g/kg, by polarised light microscopy including dispersion staining. Asbestos material was detected and positively identified at concentrations estimated to be below 0.1g/kg.
- EA200: 'No' - No asbestos found at the reporting limit 0.1g/kg, by polarised light microscopy including dispersion staining.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Sampler	: TRISTAN RODRIGUES		
Site	: ----		
Quote number	: EN/114		
No. of samples received	: 31		
No. of samples analysed	: 27		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alex Rossi	Organic Chemist	Sydney Organics, Smithfield, NSW
Brendan Schrader	Laboratory Technician	Newcastle - Asbestos, Mayfield West, NSW
Franco Lentini	LCMS Coordinator	Sydney Inorganics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Organics, Smithfield, NSW
Wisam Marassa	Inorganics Coordinator	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **SOIL**

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **ES2146625**	Page	: 1 of 16
Amendment	: **1**		
Client	: **ENVIRONMENTAL RESOURCES MANAGEMENT (ERM)**	Laboratory	: Environmental Division Sydney
Contact	: MS JESSICA LAWRENCE	Telephone	: +61-2-8784 8555
Project	: 0577577-Burwood	Date Samples Received	: 20-Dec-2021
Site	: ----	Issue Date	: 02-Feb-2022
Sampler	: TRISTAN RODRIGUES	No. of samples received	: 31
Order number	: ----	No. of samples analysed	: 27

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **NO Analysis Holding Time Outliers exist.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

Matrix: **WATER**

Quality Control Sample Type / Method	Count QC	Count Regular	Rate (%) Actual	Rate (%) Expected	Quality Control Specification
Laboratory Duplicates (DUP)					
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	1	19	5.26	10.00	NEPM 2013 B3 & ALS QC Standard
TRH - Semivolatile Fraction	0	19	0.00	10.00	NEPM 2013 B3 & ALS QC Standard
Matrix Spikes (MS)					
TRH - Semivolatile Fraction	0	19	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification
Analytical Methods	*Method*	*QC*	*Regular*	***Actual***	***Expected***	*Evaluation*

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Asbestos Identification in Soils	EA200	SOIL	AS 4964 Method for the qualitative identification of asbestos in bulk samples Analysis by Polarised Light Microscopy including dispersion staining
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM Schedule B(3)
Total Mercury by FIMS	EG035T	SOIL	In house: Referenced to APHA 3112 Hg - B (Flow-injection (SnCl2) (Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM Schedule B(3)
Polychlorinated Biphenyls (PCB)	EP066	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3).
Pesticides by GCMS	EP068	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM Schedule B(3).
TRH - Semivolatile Fraction	EP071	SOIL	In house: Referenced to USEPA SW 846 - 8015 Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40. Compliant with NEPM Schedule B(3).
Volatile Organic Compounds	EP074	SOIL	In house: Referenced to USEPA SW 846 - 8260 Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3).
PAH/Phenols (SIM)	EP075(SIM)	SOIL	In house: Referenced to USEPA SW 846 - 8270. Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)
TRH Volatiles/BTEX	EP080	SOIL	In house: Referenced to USEPA SW 846 - 8260. Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. Compliant with NEPM Schedule B(3) amended.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Analytical Methods	Method	Matrix	Method Descriptions
Dissolved Metals by ICP-MS - Suite A	EG020A-F	WATER	In house: Referenced to APHA 3125; USEPA SW846 - 6020, ALS QWI-EN/EG020. Samples are 0.45µm filtered prior to analysis. The ICPMS technique utilizes a highly efficient argon plasma to ionize selected elements. Ions are then passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to their measurement by a discrete dynode ion detector.
Dissolved Mercury by FIMS	EG035F	WATER	In house: Referenced to APHA 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) Samples are 0.45µm filtered prior to analysis. FIM-AAS is an automated flameless atomic absorption technique. A bromate/bromide reagent is used to oxidise any organic mercury compounds in the filtered sample. The ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM Schedule B(3).
TRH - Semivolatile Fraction	EP071	WATER	In house: Referenced to USEPA SW 846 - 8015 The sample extract is analysed by Capillary GC/FID and quantification is by comparison against an established 5 point calibration curve of n-Alkane standards. This method is compliant with the QC requirements of NEPM Schedule B(3)
TRH Volatiles/BTEX	EP080	WATER	In house: Referenced to USEPA SW 846 - 8260 Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. Alternatively, a sample is equilibrated in a headspace vial and a portion of the headspace determined by GCMS analysis. This method is compliant with the QC requirements of NEPM Schedule B(3)
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM Schedule B(3).
Methanolic Extraction of Soils for Purge and Trap	ORG16	SOIL	In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids	ORG17	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.
QuECheRS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.

Preparation Methods	Method	Matrix	Method Descriptions
Separatory Funnel Extraction of Liquids	ORG14	WATER	In house: Referenced to USEPA SW 846 - 3510 100 mL to 1L of sample is transferred to a separatory funnel and serially extracted three times using DCM for each extract. The resultant extracts are combined, dehydrated and concentrated for analysis. This method is compliant with NEPM Schedule B(3) . ALS default excludes sediment which may be resident in the container.
Volatiles Water Preparation	ORG16-W	WATER	A 5 mL aliquot or 5 mL of a diluted sample is added to a 40 mL VOC vial for purging.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Descriptive Results
- Surrogate Control Limits

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alana Smylie	Asbestos Identifier	Newcastle - Asbestos, Mayfield West, NSW
Alex Rossi	Organic Chemist	Sydney Organics, Smithfield, NSW
Evie Sidarta	Inorganic Chemist	Sydney Inorganics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Inorganics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Organics, Smithfield, NSW
Wisam Marassa	Inorganics Coordinator	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.
- EA200: Asbestos Identification Samples were analysed by Polarised Light Microscopy including dispersion staining.
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP080: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP068: Where reported, Total Chlordane (sum) is the sum of the reported concentrations of cis-Chlordane and trans-Chlordane at or above the LOR.
- EP068: Where reported, Total OCP is the sum of the reported concentrations of all Organochlorine Pesticides at or above LOR.
- EP074: Where reported, Total Trihalomethanes is the sum of the reported concentrations of all Trihalomethanes at or above the LOR.
- EP074: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP074: Where reported, Sum of chlorinated hydrocarbons includes carbon tetrachloride, chlorobenzene, chloroform, 1,2-dichlorobenzene, 1,4-dichlorobenzene, 1,2-dichloroethane, 1,1-dichloroethene, cis-1,2-dichlorothene, trans-1,2-dichlorothene, 1,1,1,2-tetrachloroethane, 1,1,2,2-tetrachloroethane, 1,2,4-trichlorobenzene, 1,1,1-trichloroethane, 1,1,2-trichloroethane, trichloroethene, vinyl chloride, hexachlorobutadiene and methylene chloride.
- EP074: Where reported, Total Trimethylbenzenes is the sum of the reported concentrations of 1.2.3-Trimethylbenzene, 1.2.4-Trimethylbenzene and 1.3.5-Trimethylbenzene at or above the LOR.
- EP075(SIM): Where reported, Total Cresol is the sum of the reported concentrations of 2-Methylphenol and 3- & 4-Methylphenol at or above the LOR.
- EP066 : Positive PCB result is confirmed by re-extraction and re-analysis.
- EG035: Positive Mercury result ES2146990#48 has been confirmed by reanalysis.
- **EA200 Legend**
- EA200 'Am' Amosite (brown asbestos)
- EA200 'Cr' Crocidolite (blue asbestos)
- EA200 'Ch' Chrysotile (white asbestos)
- EA200: 'UMF' Unknown Mineral Fibres. "-" indicates fibres detected may or may not be asbestos fibres. Confirmation by alternative techniques is recommended.
- EA200: Analysis of asbestos from swabs and tapes is not covered under the current scope of NATA accreditation.
- Amendment (19/01/2022): This report has been amended as a result of a request to change sample identification numbers (IDs) received 19/01/2022, for samples ES2146990-038. All analysis results are as per the previous report.

- Amendment (01/02/2022): This report has been amended as a result of misinterpretation of sample identification numbers (IDs) for Sample 051. All analysis results are as per the previous report.
- EP080: The trip spike and its control have been analysed for volatile TPH and BTEXN only. The trip spike and control were prepared in the lab using reagent grade sand spiked with petrol. The spike was dispatched from the lab and the control retained.
- Amendment (02/02/2022):This report has been amended to changed LOR for PFAS analysis to 5ug/kg.
- EA200 'Trace' - Asbestos fibres ("Free Fibres") detected by trace analysis per AS4964. The result can be interpreted that the sample contains detectable 'respirable' asbestos fibres
- EA200: For samples larger than 30g, the <2mm fraction may be sub-sampled prior to trace analysis as outlined in ISO23909:2008(E) Sect 6.3.2-2
- EA200: 'Yes' - Asbestos detected by polarised light microscopy including dispersion staining.
- EA200: 'No*' - No asbestos found, at the reporting limit of 0.1g/kg, by polarised light microscopy including dispersion staining. Asbestos material was detected and positively identified at concentrations estimated to be below 0.1g/kg.
- EA200: 'No' - No asbestos found at the reporting limit 0.1g/kg, by polarised light microscopy including dispersion staining.
- EA200: N/A - Not Applicable
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Alana Smylie	Asbestos Identifier	Newcastle - Asbestos, Mayfield West, NSW
Alex Rossi	Organic Chemist	Sydney Organics, Smithfield, NSW
Evie Sidarta	Inorganic Chemist	Sydney Inorganics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Inorganics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Organics, Smithfield, NSW
Wisam Marassa	Inorganics Coordinator	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Sub-Matrix: **SOIL**

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **SOIL**

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Sub-Matrix: **SOIL**

ALS Environmental

QA/QC Compliance Assessment to assist with Quality Review

Work Order	: **ES2146990**	Page	: 1 of 27
Amendment	: **3**		
Client	: **ENVIRONMENTAL RESOURCES MANAGEMENT (ERM)**	Laboratory	: Environmental Division Sydney
Contact	: MS JESSICA LAWRENCE	Telephone	: +61-2-8784 8555
Project	: 0577577 - Burwood	Date Samples Received	: 22-Dec-2021
Site	: ----	Issue Date	: 02-Feb-2022
Sampler	: TRISTAN RODRIGUES	No. of samples received	: 58
Order number	: ----	No. of samples analysed	: 51

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **NO Laboratory Control outliers occur.**
- **NO Matrix Spike outliers occur.**
- **Surrogate recovery outliers exist for all regular sample matrices - please see following pages for full details.**

Outliers : Analysis Holding Time Compliance

- **Analysis Holding Time Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Regular Sample Surrogates

TRH - Semivolatile Fraction	0	14	0.00	5.00	NEPM 2013 B3 & ALS QC Standard

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **SOIL**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Method / Container / Client Sample ID(s)	Sample Date	Extraction / Preparation: Date extracted	Extraction / Preparation: Due for extraction	Extraction / Preparation: Evaluation	Analysis: Date analysed	Analysis: Due for analysis	Analysis: Evaluation

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **SOIL**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Moisture Content	EA055	SOIL	In house: A gravimetric procedure based on weight loss over a 12 hour drying period at 105-110 degrees C. This method is compliant with NEPM Schedule B(3).
Asbestos Identification in Soils	EA200	SOIL	AS 4964 Method for the qualitative identification of asbestos in bulk samples Analysis by Polarised Light Microscopy including dispersion staining
Total Metals by ICP-AES	EG005T	SOIL	In house: Referenced to APHA 3120; USEPA SW 846 - 6010. Metals are determined following an appropriate acid digestion of the soil. The ICPAES technique ionises samples in a plasma, emitting a characteristic spectrum based on metals present. Intensities at selected wavelengths are compared against those of matrix matched standards. This method is compliant with NEPM Schedule B(3)
Total Mercury by FIMS	EG035T	SOIL	In house: Referenced to APHA 3112 Hg - B (Flow-injection (SnCl2) (Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. Mercury in solids are determined following an appropriate acid digestion. Ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM Schedule B(3)
Polychlorinated Biphenyls (PCB)	EP066	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3).
Pesticides by GCMS	EP068	SOIL	In house: Referenced to USEPA SW 846 - 8270 Extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This technique is compliant with NEPM Schedule B(3).
TRH - Semivolatile Fraction	EP071	SOIL	In house: Referenced to USEPA SW 846 - 8015 Sample extracts are analysed by Capillary GC/FID and quantified against alkane standards over the range C10 - C40. Compliant with NEPM Schedule B(3).
Volatile Organic Compounds	EP074	SOIL	In house: Referenced to USEPA SW 846 - 8260 Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3).
PAH/Phenols (SIM)	EP075(SIM)	SOIL	In house: Referenced to USEPA SW 846 - 8270. Extracts are analysed by Capillary GC/MS in Selective Ion Mode (SIM) and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)
TRH Volatiles/BTEX	EP080	SOIL	In house: Referenced to USEPA SW 846 - 8260. Extracts are analysed by Purge and Trap, Capillary GC/MS. Quantification is by comparison against an established 5 point calibration curve. Compliant with NEPM Schedule B(3) amended.
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	SOIL	In-house: Analysis of soils by solvent extraction followed by LC-Electrospray-MS-MS, Negative Mode using MRM using internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to a portion of soil which is then extracted with MTBE and an ion pairing reagent. A portion of extract is exchanged into the analytical solvent mixture, combined with an equal volume reagent water and filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Analytical Methods	Method	Matrix	Method Descriptions
Asbestos Identification in Bulk Solids	EA200	SOLID	In house: Referenced to AS 4964 Method for the qualitative identification of asbestos in bulk samples Analysis by Polarised Light Microscopy including dispersion staining
Total Metals by ICP-MS - Suite A	EG020A-T	WATER	In house: Referenced to APHA 3125; USEPA SW846 - 6020, ALS QWI-EN/EG020. The ICPMS technique utilizes a highly efficient argon plasma to ionize selected elements. Ions are then passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to their measurement by a discrete dynode ion detector.
Total Mercury by FIMS	EG035T	WATER	In house: Referenced to APHA 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. A bromate/bromide reagent is used to oxidise any organic mercury compounds in the unfiltered sample. The ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM Schedule B(3).
TRH - Semivolatile Fraction	EP071	WATER	In house: Referenced to USEPA SW 846 - 8015 The sample extract is analysed by Capillary GC/FID and quantification is by comparison against an established 5 point calibration curve of n-Alkane standards. This method is compliant with the QC requirements of NEPM Schedule B(3)
TRH Volatiles/BTEX	EP080	WATER	In house: Referenced to USEPA SW 846 - 8260 Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. Alternatively, a sample is equilibrated in a headspace vial and a portion of the headspace determined by GCMS analysis. This method is compliant with the QC requirements of NEPM Schedule B(3)
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
Hot Block Digest for metals in soils sediments and sludges	EN69	SOIL	In house: Referenced to USEPA 200.2. Hot Block Acid Digestion 1.0g of sample is heated with Nitric and Hydrochloric acids, then cooled. Peroxide is added and samples heated and cooled again before being filtered and bulked to volume for analysis. Digest is appropriate for determination of selected metals in sludge, sediments, and soils. This method is compliant with NEPM Schedule B(3).
Methanolic Extraction of Soils for Purge and Trap	ORG16	SOIL	In house: Referenced to USEPA SW 846 - 5030A. 5g of solid is shaken with surrogate and 10mL methanol prior to analysis by Purge and Trap - GC/MS.
Tumbler Extraction of Solids	ORG17	SOIL	In house: Mechanical agitation (tumbler). 10g of sample, Na2SO4 and surrogate are extracted with 30mL 1:1 DCM/Acetone by end over end tumble. The solvent is decanted, dehydrated and concentrated (by KD) to the desired volume for analysis.
QuECheRS Extraction of Solids	ORG71	SOIL	In house: Sequential extractions with Acetonitrile/Methanol by shaking. Extraction efficiency aided by the addition of salts under acidic conditions. Where relevant, interferences from co-extracted organics are removed with dispersive clean-up media (dSPE). The extract is either diluted or concentrated and exchanged into the analytical solvent.

Preparation Methods	Method	Matrix	Method Descriptions
Digestion for Total Recoverable Metals	EN25	WATER	In house: Referenced to USEPA SW846-3005. Method 3005 is a Nitric/Hydrochloric acid digestion procedure used to prepare surface and ground water samples for analysis by ICPAES or ICPMS. This method is compliant with NEPM Schedule B(3)
Separatory Funnel Extraction of Liquids	ORG14	WATER	In house: Referenced to USEPA SW 846 - 3510 100 mL to 1L of sample is transferred to a separatory funnel and serially extracted three times using DCM for each extract. The resultant extracts are combined, dehydrated and concentrated for analysis. This method is compliant with NEPM Schedule B(3) . ALS default excludes sediment which may be resident in the container.
Volatiles Water Preparation	ORG16-W	WATER	A 5 mL aliquot or 5 mL of a diluted sample is added to a 40 mL VOC vial for purging.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

Thank Khaleda,

Happy New Year and apologies for the late reply on this.

- Could Sample 38 be labelled as BH125 – 0.5
- Noted for sample 115-0.2
- Sorry no asbestos analysis required on sample 36

Could you please reissue the result with the updated labelling

Kind Regards

Tristan Rodrigues
Environmental Consultant

Subject: ALS Workorder ES2146990, Client ENVRES, Project 0577577 - Burwood

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Hi Tristan,

I hope you are doing well.

I just wanted to let you know that for the attached COC, we have received 2 sets of TB and TS samples. We have scheduled one for analysis as per the COC and kept the other one on hold.

- Sample 38 - BH125 -1.0 was received as BH125 – 0.5
- Sample BH115 – 0.2 has been listed twice on the COC as #27 and 52, we have logged this as #27
- No Asbestos bag was received for sample 36 therefore Asbestos was not logged.
- One Asbestos bag was received without any sample ID – has been kept on hold.

Thank you

Kind regards,

Khaleda Ataei

Ivan Taylor	Analyst	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EK059G: LOR raised for NOx due to sample matrix.
- EP075 (SIM): Where reported, Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero.
- EP080: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP074: Where reported, Total Trihalomethanes is the sum of the reported concentrations of all Trihalomethanes at or above the LOR.
- EP074: Where reported, Total Trimethylbenzenes is the sum of the reported concentrations of 1.2.3-Trimethylbenzene, 1.2.4-Trimethylbenzene and 1.3.5-Trimethylbenzene at or above the LOR.
- EP075(SIM): Where reported, Total Cresol is the sum of the reported concentrations of 2-Methylphenol and 3- & 4-Methylphenol at or above the LOR.
- EK057G: LOR raised for Nitrite on a few samples due to sample matrix.
- EP080&74: ES2201979-08 has been confrimed by re-analysis.
- TDS by method EA-015 may bias high for various samples due to the presence of fine particulate matter, which may pass through the prescribed GF/C paper.
- Sodium Adsorption Ratio (where reported): Where results for Na, Ca or Mg are <LOR, a concentration at half the reported LOR is incorporated into the SAR calculation. This represents a conservative approach for Na relative to the assumption that <LOR = zero concentration and a conservative approach for Ca & Mg relative to the assumption that <LOR is equivalent to the LOR concentration.

No. of samples analysed	: 14		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*

Edwandy Fadjar	Organic Coordinator	Sydney Organics, Smithfield, NSW
Ivan Taylor	Analyst	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

Order number	: ----	No. of samples analysed	: 14

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **Laboratory Control outliers exist - please see following pages for full details.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **Surrogate recovery outliers exist for all regular sample matrices - please see following pages for full details.**

Outliers : Analysis Holding Time Compliance

- **Analysis Holding Time Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Quality Control Samples

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Quality Control Sample Type		Count		Rate (%)			Quality Control Specification
Analytical Methods	*Method*	*QC*	*Regular*	***Actual***	***Expected***	*Evaluation*

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Total Dissolved Solids (High Level)	EA015H	WATER	In house: Referenced to APHA 2540C. A gravimetric procedure that determines the amount of `filterable` residue in an aqueous sample. A well-mixed sample is filtered through a glass fibre filter (1.2um). The filtrate is evaporated to dryness and dried to constant weight at 180+/-5C. This method is compliant with NEPM Schedule B(3)
Alkalinity by PC Titrator	ED037-P	WATER	In house: Referenced to APHA 2320 B This procedure determines alkalinity by automated measurement (e.g. PC Titrate) on a settled supernatant aliquot of the sample using pH 4.5 for indicating the total alkalinity end-point. This method is compliant with NEPM Schedule B(3)
Sulfate (Turbidimetric) as SO4 2- by Discrete Analyser	ED041G	WATER	In house: Referenced to APHA 4500-SO4. Dissolved sulfate is determined in a 0.45um filtered sample. Sulfate ions are converted to a barium sulfate suspension in an acetic acid medium with barium chloride. Light absorbance of the BaSO4 suspension is measured by a photometer and the SO4-2 concentration is determined by comparison of the reading with a standard curve. This method is compliant with NEPM Schedule B(3)
Chloride by Discrete Analyser	ED045G	WATER	In house: Referenced to APHA 4500 Cl - G.The thiocyanate ion is liberated from mercuric thiocyanate through sequestration of mercury by the chloride ion to form non-ionised mercuric chloride.in the presence of ferric ions the librated thiocynate forms highly-coloured ferric thiocynate which is measured at 480 nm APHA seal method 2 017-1-L
Major Cations - Dissolved	ED093F	WATER	In house: Referenced to APHA 3120 and 3125; USEPA SW 846 - 6010 and 6020; Cations are determined by either ICP-AES or ICP-MS techniques. This method is compliant with NEPM Schedule B(3) Sodium Adsorption Ratio is calculated from Ca, Mg and Na which determined by ALS in house method QWI-EN/ED093F. This method is compliant with NEPM Schedule B(3) Hardness parameters are calculated based on APHA 2340 B. This method is compliant with NEPM Schedule B(3)
Dissolved Metals by ICP-MS - Suite A	EG020A-F	WATER	In house: Referenced to APHA 3125; USEPA SW846 - 6020, ALS QWI-EN/EG020. Samples are 0.45µm filtered prior to analysis. The ICPMS technique utilizes a highly efficient argon plasma to ionize selected elements. Ions are then passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to their measurement by a discrete dynode ion detector.
Dissolved Mercury by FIMS	EG035F	WATER	In house: Referenced to APHA 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) Samples are 0.45µm filtered prior to analysis. FIM-AAS is an automated flameless atomic absorption technique. A bromate/bromide reagent is used to oxidise any organic mercury compounds in the filtered sample. The ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM Schedule B(3).
Ammonia as N by Discrete analyser	EK055G	WATER	In house: Referenced to APHA 4500-NH3 G Ammonia is determined by direct colorimetry by Discrete Analyser. This method is compliant with NEPM Schedule B(3)
Nitrite as N by Discrete Analyser	EK057G	WATER	In house: Referenced to APHA 4500-NO2- B. Nitrite is determined by direct colourimetry by Discrete Analyser. This method is compliant with NEPM Schedule B(3)
Nitrate as N by Discrete Analyser	EK058G	WATER	In house: Referenced to APHA 4500-NO3- F. Nitrate is reduced to nitrite by way of a chemical reduction followed by quantification by Discrete Analyser. Nitrite is determined seperately by direct colourimetry and result for Nitrate calculated as the difference between the two results. This method is compliant with NEPM Schedule B(3)

Analytical Methods	Method	Matrix	Method Descriptions
Nitrite and Nitrate as N (NOx) by Discrete Analyser	EK059G	WATER	In house: Referenced to APHA 4500-NO3- F. Combined oxidised Nitrogen (NO2+NO3) is determined by Chemical Reduction and direct colourimetry by Discrete Analyser. This method is compliant with NEPM Schedule B(3)
Total Kjeldahl Nitrogen as N By Discrete Analyser	EK061G	WATER	In house: Referenced to APHA 4500-Norg D (In house). An aliquot of sample is digested using a high temperature Kjeldahl digestion to convert nitrogenous compounds to ammonia. Ammonia is determined colorimetrically by discrete analyser. This method is compliant with NEPM Schedule B(3)
Total Nitrogen as N (TKN + Nox) By Discrete Analyser	EK062G	WATER	In house: Referenced to APHA 4500-Norg / 4500-NO3-. This method is compliant with NEPM Schedule B(3)
Total Phosphorus as P By Discrete Analyser	EK067G	WATER	In house: Referenced to APHA 4500-P H, Jirka et al, Zhang et al. This procedure involves sulphuric acid digestion of a sample aliquot to break phosphorus down to orthophosphate. The orthophosphate reacts with ammonium molybdate and antimony potassium tartrate to form a complex which is then reduced and its concentration measured at 880nm using discrete analyser. This method is compliant with NEPM Schedule B(3)
Ionic Balance by PCT DA and Turbi SO4 DA	* EN055 - PG	WATER	In house: Referenced to APHA 1030F. This method is compliant with NEPM Schedule B(3)
TRH - Semivolatile Fraction	EP071	WATER	In house: Referenced to USEPA SW 846 - 8015 The sample extract is analysed by Capillary GC/FID and quantification is by comparison against an established 5 point calibration curve of n-Alkane standards. This method is compliant with the QC requirements of NEPM Schedule B(3)
Volatile Organic Compounds	EP074	WATER	In house: Referenced to USEPA SW 846 - 8260 Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)
PAH/Phenols (GC/MS - SIM)	EP075(SIM)	WATER	In house: Referenced to USEPA SW 846 - 8270 Sample extracts are analysed by Capillary GC/MS in SIM Mode and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)
TRH Volatiles/BTEX	EP080	WATER	In house: Referenced to USEPA SW 846 - 8260 Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. Alternatively, a sample is equilibrated in a headspace vial and a portion of the headspace determined by GCMS analysis. This method is compliant with the QC requirements of NEPM Schedule B(3)

Preparation Methods	Method	Matrix	Method Descriptions
TKN/TP Digestion	EK061/EK067	WATER	In house: Referenced to APHA 4500 Norg - D; APHA 4500 P - H. This method is compliant with NEPM Schedule B(3)
Separatory Funnel Extraction of Liquids	ORG14	WATER	In house: Referenced to USEPA SW 846 - 3510 100 mL to 1L of sample is transferred to a separatory funnel and serially extracted three times using DCM for each extract. The resultant extracts are combined, dehydrated and concentrated for analysis. This method is compliant with NEPM Schedule B(3) . ALS default excludes sediment which may be resident in the container.
Volatiles Water Preparation	ORG16-W	WATER	A 5 mL aliquot or 5 mL of a diluted sample is added to a 40 mL VOC vial for purging.

Franco Lentini	LCMS Coordinator	Sydney Organics, Smithfield, NSW
Ivan Taylor	Analyst	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP075 (SIM): Where reported, Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero.
- EP075: Where reported, Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero.
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP080: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP074: Where reported, Total Trihalomethanes is the sum of the reported concentrations of all Trihalomethanes at or above the LOR.
- EP074: Where reported, Total Trimethylbenzenes is the sum of the reported concentrations of 1.2.3-Trimethylbenzene, 1.2.4-Trimethylbenzene and 1.3.5-Trimethylbenzene at or above the LOR.
- EP075(SIM): Where reported, Total Cresol is the sum of the reported concentrations of 2-Methylphenol and 3- & 4-Methylphenol at or above the LOR.
- EP231X: Positive result for various analytes on sample ES2202047_001,004-005,007,009-011,017,019,021 has been confirmed by re-extraction and re-analysis.
- EG035: Poor matrix spike recovery was obtained for Mercury on sample ES2201942 # 1. Confirmed by re-analysis.
- EK059G, EK057G: NOx and Nitrite results for sample no: 12 confirmed via re-analysis.
- EP075: Poor surrogate recovery due to sample heterogeneity. Confirmed by re-extraction and re-analysis.
- EP075(SIM): Particular sample phenolic surrogate not determined due to sample matrix interferences.
- EP080: Sample TRIP SPIKE contains volatile compounds spiked into the sample containers prior to dispatch from the laboratory. BTEXN compounds spiked at 20 ug/L.
- EP075: Where reported, 'Sum of PAH' is the sum of the USEPA 16 priority PAHs
- Sodium Adsorption Ratio (where reported): Where results for Na, Ca or Mg are <LOR, a concentration at half the reported LOR is incorporated into the SAR calculation. This represents a conservative approach for Na relative to the assumption that <LOR = zero concentration and a conservative approach for Ca & Mg relative to the assumption that <LOR is equivalent to the LOR concentration.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

QUALITY CONTROL REPORT

Work Order	: **ES2202047**	Page	: 1 of 22
Client	: **ENVIRONMENTAL RESOURCES MANAGEMENT (ERM)**	Laboratory	: Environmental Division Sydney
Contact	: NICHOLAS GRBICH	Contact	: Customer Services ES
Address	: LEVEL 15 309 KENT STREET SYDNEY NSW AUSTRALIA 2000	Address	: 277-289 Woodpark Road Smithfield NSW Australia 2164
Telephone	: ----	Telephone	: +61-2-8784 8555
Project	: 0628507	Date Samples Received	: 21-Jan-2022
Order number	: ----	Date Analysis Commenced	: 24-Jan-2022
C-O-C number	: ----	Issue Date	: 01-Feb-2022
Sampler	: TAJ MONDON		
Site	: ----		
Quote number	: EN/114		
No. of samples received	: 24		
No. of samples analysed	: 23		

Accreditation No. 825
Accredited for compliance with
ISO/IEC 17025 - Testing

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted, unless the sampling was conducted by ALS. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percentage Difference (RPD) and Acceptance Limits
- Method Blank (MB) and Laboratory Control Spike (LCS) Report; Recovery and Acceptance Limits
- Matrix Spike (MS) Report; Recovery and Acceptance Limits

Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is carried out in compliance with procedures specified in 21 CFR Part 11.

Signatories	*Position*	*Accreditation Category*
Ankit Joshi	Inorganic Chemist	Sydney Inorganics, Smithfield, NSW
Edwandy Fadjar	Organic Coordinator	Sydney Organics, Smithfield, NSW
Franco Lentini	LCMS Coordinator	Sydney Organics, Smithfield, NSW
Ivan Taylor	Analyst	Sydney Inorganics, Smithfield, NSW

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Method Blank (MB) and Laboratory Control Sample (LCS) Report

The quality control term Method / Laboratory Blank refers to an analyte free matrix to which all reagents are added in the same volumes or proportions as used in standard sample preparation. The purpose of this QC parameter is to monitor potential laboratory contamination. The quality control term Laboratory Control Sample (LCS) refers to a certified reference material, or a known interference free matrix spiked with target analytes. The purpose of this QC parameter is to monitor method precision and accuracy independent of sample matrix. Dynamic Recovery Limits are based on statistical evaluation of processed LCS.

Sub-Matrix: **WATER**

				Method Blank (MB) Report	Laboratory Control Spike (LCS) Report			
					Spike	Spike Recovery (%)	Acceptable Limits (%)	
Method: Compound	CAS Number	LOR	Unit	Result	Concentration	LCS	Low	High
EA015: Total Dissolved Solids dried at 180 ± 5 °C (QCLot: 4136430)

Matrix Spike (MS) Report

The quality control term Matrix Spike (MS) refers to an intralaboratory split sample spiked with a representative set of target analytes. The purpose of this QC parameter is to monitor potential matrix effects on analyte recoveries. Static Recovery Limits as per laboratory Data Quality Objectives (DQOs). Ideal recovery ranges stated may be waived in the event of sample matrix interference.

This report is automatically generated by the ALS LIMS through interpretation of the ALS Quality Control Report and several Quality Assurance parameters measured by ALS. This automated reporting highlights any non-conformances, facilitates faster and more accurate data validation and is designed to assist internal expert and external Auditor review. Many components of this report contribute to the overall DQO assessment and reporting for guideline compliance.

Brief method summaries and references are also provided to assist in traceability.

Summary of Outliers

Outliers : Quality Control Samples

This report highlights outliers flagged in the Quality Control (QC) Report.

- **NO Method Blank value outliers occur.**
- **NO Duplicate outliers occur.**
- **Laboratory Control outliers exist - please see following pages for full details.**
- **Matrix Spike outliers exist - please see following pages for full details.**
- **For all regular sample matrices, NO surrogate recovery outliers occur.**

Outliers : Analysis Holding Time Compliance

- **Analysis Holding Time Outliers exist - please see following pages for full details.**

Outliers : Frequency of Quality Control Samples

- **Quality Control Sample Frequency Outliers exist - please see following pages for full details.**

Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

Matrix: **WATER**

Compound Group Name	Laboratory Sample ID	Client Sample ID	Analyte	CAS Number	Data	Limits	Comment
Laboratory Control Spike (LCS) Recoveries							
EK067G: Total Phosphorus as P by Discrete Analyser	QC-MRG2-41369580	----	**Total Phosphorus as P**	----	109 %	72.0-108%	**Recovery greater than upper control limit**

Analysis Holding Time Compliance

If samples are identified below as having been analysed or extracted outside of recommended holding times, this should be taken into consideration when interpreting results.

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times (referencing USEPA SW 846, APHA, AS and NEPM) based on the sample container provided. Dates reported represent first date of extraction or analysis and preclude subsequent dilutions and reruns. A listing of breaches (if any) is provided herein.

Holding time for leachate methods (e.g. TCLP) vary according to the analytes reported. Assessment compares the leach date with the shortest analyte holding time for the equivalent soil method. These are: organics 14 days, mercury 28 days & other metals 180 days. A recorded breach does not guarantee a breach for all non-volatile parameters.

Holding times for ***VOC in soils*** vary according to analytes of interest. Vinyl Chloride and Styrene holding time is 7 days; others 14 days. A recorded breach does not guarantee a breach for all VOC analytes and should be verified in case the reported breach is a false positive or Vinyl Chloride and Styrene are not key analytes of interest/concern.

Matrix: **WATER**

Evaluation: × = Holding time breach ; ✓ = Within holding time.

Quality Control Parameter Frequency Compliance

The following report summarises the frequency of laboratory QC samples analysed within the analytical lot(s) in which the submitted sample(s) was(were) processed. Actual rate should be greater than or equal to the expected rate. A listing of breaches is provided in the Summary of Outliers.

Matrix: **WATER**

Evaluation: × = Quality Control frequency not within specification ; ✓ = Quality Control frequency within specification.

Brief Method Summaries

The analytical procedures used by the Environmental Division have been developed from established internationally recognized procedures such as those published by the US EPA, APHA, AS and NEPM. In house developed procedures are employed in the absence of documented standards or by client request. The following report provides brief descriptions of the analytical procedures employed for results reported in the Certificate of Analysis. Sources from which ALS methods have been developed are provided within the Method Descriptions.

Analytical Methods	Method	Matrix	Method Descriptions
Total Dissolved Solids (High Level)	EA015H	WATER	In house: Referenced to APHA 2540C. A gravimetric procedure that determines the amount of `filterable` residue in an aqueous sample. A well-mixed sample is filtered through a glass fibre filter (1.2um). The filtrate is evaporated to dryness and dried to constant weight at 180+/-5C. This method is compliant with NEPM Schedule B(3)
Alkalinity by PC Titrator	ED037-P	WATER	In house: Referenced to APHA 2320 B This procedure determines alkalinity by automated measurement (e.g. PC Titrate) on a settled supernatant aliquot of the sample using pH 4.5 for indicating the total alkalinity end-point. This method is compliant with NEPM Schedule B(3)
Sulfate (Turbidimetric) as SO4 2- by Discrete Analyser	ED041G	WATER	In house: Referenced to APHA 4500-SO4. Dissolved sulfate is determined in a 0.45um filtered sample. Sulfate ions are converted to a barium sulfate suspension in an acetic acid medium with barium chloride. Light absorbance of the BaSO4 suspension is measured by a photometer and the SO4-2 concentration is determined by comparison of the reading with a standard curve. This method is compliant with NEPM Schedule B(3)
Chloride by Discrete Analyser	ED045G	WATER	In house: Referenced to APHA 4500 Cl - G.The thiocyanate ion is liberated from mercuric thiocyanate through sequestration of mercury by the chloride ion to form non-ionised mercuric chloride.in the presence of ferric ions the librated thiocynate forms highly-coloured ferric thiocynate which is measured at 480 nm APHA seal method 2 017-1-L
Major Cations - Dissolved	ED093F	WATER	In house: Referenced to APHA 3120 and 3125; USEPA SW 846 - 6010 and 6020; Cations are determined by either ICP-AES or ICP-MS techniques. This method is compliant with NEPM Schedule B(3) Sodium Adsorption Ratio is calculated from Ca, Mg and Na which determined by ALS in house method QWI-EN/ED093F. This method is compliant with NEPM Schedule B(3) Hardness parameters are calculated based on APHA 2340 B. This method is compliant with NEPM Schedule B(3)
Dissolved Metals by ICP-MS - Suite A	EG020A-F	WATER	In house: Referenced to APHA 3125; USEPA SW846 - 6020, ALS QWI-EN/EG020. Samples are 0.45µm filtered prior to analysis. The ICPMS technique utilizes a highly efficient argon plasma to ionize selected elements. Ions are then passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to their measurement by a discrete dynode ion detector.
Total Metals by ICP-MS - Suite A	EG020A-T	WATER	In house: Referenced to APHA 3125; USEPA SW846 - 6020, ALS QWI-EN/EG020. The ICPMS technique utilizes a highly efficient argon plasma to ionize selected elements. Ions are then passed into a high vacuum mass spectrometer, which separates the analytes based on their distinct mass to charge ratios prior to their measurement by a discrete dynode ion detector.
Dissolved Mercury by FIMS	EG035F	WATER	In house: Referenced to APHA 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) Samples are 0.45µm filtered prior to analysis. FIM-AAS is an automated flameless atomic absorption technique. A bromate/bromide reagent is used to oxidise any organic mercury compounds in the filtered sample. The ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM Schedule B(3).

Analytical Methods	Method	Matrix	Method Descriptions
Total Mercury by FIMS	EG035T	WATER	In house: Referenced to APHA 3112 Hg - B (Flow-injection (SnCl2)(Cold Vapour generation) AAS) FIM-AAS is an automated flameless atomic absorption technique. A bromate/bromide reagent is used to oxidise any organic mercury compounds in the unfiltered sample. The ionic mercury is reduced online to atomic mercury vapour by SnCl2 which is then purged into a heated quartz cell. Quantification is by comparing absorbance against a calibration curve. This method is compliant with NEPM Schedule B(3).
Ammonia as N by Discrete analyser	EK055G	WATER	In house: Referenced to APHA 4500-NH3 G Ammonia is determined by direct colorimetry by Discrete Analyser. This method is compliant with NEPM Schedule B(3)
Nitrite as N by Discrete Analyser	EK057G	WATER	In house: Referenced to APHA 4500-NO2- B. Nitrite is determined by direct colourimetry by Discrete Analyser. This method is compliant with NEPM Schedule B(3)
Nitrate as N by Discrete Analyser	EK058G	WATER	In house: Referenced to APHA 4500-NO3- F. Nitrate is reduced to nitrite by way of a chemical reduction followed by quantification by Discrete Analyser. Nitrite is determined seperately by direct colourimetry and result for Nitrate calculated as the difference between the two results. This method is compliant with NEPM Schedule B(3)
Nitrite and Nitrate as N (NOx) by Discrete Analyser	EK059G	WATER	In house: Referenced to APHA 4500-NO3- F. Combined oxidised Nitrogen (NO2+NO3) is determined by Chemical Reduction and direct colourimetry by Discrete Analyser. This method is compliant with NEPM Schedule B(3)
Total Kjeldahl Nitrogen as N By Discrete Analyser	EK061G	WATER	In house: Referenced to APHA 4500-Norg D (In house). An aliquot of sample is digested using a high temperature Kjeldahl digestion to convert nitrogenous compounds to ammonia. Ammonia is determined colorimetrically by discrete analyser. This method is compliant with NEPM Schedule B(3)
Total Nitrogen as N (TKN + Nox) By Discrete Analyser	EK062G	WATER	In house: Referenced to APHA 4500-Norg / 4500-NO3-. This method is compliant with NEPM Schedule B(3)
Total Phosphorus as P By Discrete Analyser	EK067G	WATER	In house: Referenced to APHA 4500-P H, Jirka et al, Zhang et al. This procedure involves sulphuric acid digestion of a sample aliquot to break phosphorus down to orthophosphate. The orthophosphate reacts with ammonium molybdate and antimony potassium tartrate to form a complex which is then reduced and its concentration measured at 880nm using discrete analyser. This method is compliant with NEPM Schedule B(3)
Reactive Phosphorus as P-By Discrete Analyser	EK071G	WATER	In house: Referenced to APHA 4500-P F Ammonium molybdate and potassium antimonyl tartrate reacts in acid medium with othophosphate to form a heteropoly acid -phosphomolybdic acid - which is reduced to intensely coloured molybdenum blue by ascorbic acid. Quantification is by Discrete Analyser. This method is compliant with NEPM Schedule B(3)
Ionic Balance by PCT DA and Turbi SO4 DA	* EN055 - PG	WATER	In house: Referenced to APHA 1030F. This method is compliant with NEPM Schedule B(3)
TRH - Semivolatile Fraction	EP071	WATER	In house: Referenced to USEPA SW 846 - 8015 The sample extract is analysed by Capillary GC/FID and quantification is by comparison against an established 5 point calibration curve of n-Alkane standards. This method is compliant with the QC requirements of NEPM Schedule B(3)
Volatile Organic Compounds	EP074	WATER	In house: Referenced to USEPA SW 846 - 8260 Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)
Semivolatile Organic Compounds	EP075	WATER	In house: Referenced to USEPA SW 846 - 8270 Sample extracts are analysed by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)

Analytical Methods	Method	Matrix	Method Descriptions
PAH/Phenols (GC/MS - SIM)	EP075(SIM)	WATER	In house: Referenced to USEPA SW 846 - 8270 Sample extracts are analysed by Capillary GC/MS in SIM Mode and quantification is by comparison against an established 5 point calibration curve. This method is compliant with NEPM Schedule B(3)
TRH Volatiles/BTEX	EP080	WATER	In house: Referenced to USEPA SW 846 - 8260 Water samples are directly purged prior to analysis by Capillary GC/MS and quantification is by comparison against an established 5 point calibration curve. Alternatively, a sample is equilibrated in a headspace vial and a portion of the headspace determined by GCMS analysis. This method is compliant with the QC requirements of NEPM Schedule B(3)
Per- and Polyfluoroalkyl Substances (PFAS) by LCMSMS	EP231X	WATER	In-house: Analysis of fresh and saline waters by Solid Phase Extraction (SPE) followed by LC-Electrospray-MS-MS, Negative Mode using MRM and internal standard quantitation. Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures and data quality objectives conform to US DoD QSM 5.3, table B-15 requirements.

Preparation Methods	Method	Matrix	Method Descriptions
TKN/TP Digestion	EK061/EK067	WATER	In house: Referenced to APHA 4500 Norg - D; APHA 4500 P - H. This method is compliant with NEPM Schedule B(3)
Digestion for Total Recoverable Metals	EN25	WATER	In house: Referenced to USEPA SW846-3005. Method 3005 is a Nitric/Hydrochloric acid digestion procedure used to prepare surface and ground water samples for analysis by ICPAES or ICPMS. This method is compliant with NEPM Schedule B(3)
Separatory Funnel Extraction of Liquids	ORG14	WATER	In house: Referenced to USEPA SW 846 - 3510 100 mL to 1L of sample is transferred to a separatory funnel and serially extracted three times using DCM for each extract. The resultant extracts are combined, dehydrated and concentrated for analysis. This method is compliant with NEPM Schedule B(3) . ALS default excludes sediment which may be resident in the container.
Volatiles Water Preparation	ORG16-W	WATER	A 5 mL aliquot or 5 mL of a diluted sample is added to a 40 mL VOC vial for purging.
Solid Phase Extraction (SPE) for PFAS in water	ORG72	WATER	In-house: Isotopically labelled analogues of target analytes used as internal standards and surrogates are added to the sample container. The entire contents are transferred to a solid phase extraction (SPE) cartridge. The sample container is successively rinsed with aliquots of the elution solvent. The eluted extract is combined with an equal volume of reagent water and a portion is filtered for analysis. Method procedures conform to US DoD QSM 5.3, table B-15 requirements.

156												
157	Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.											
158	Recommendations are based upon data size, data distribution, and skewness.											
159	These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).											
160	However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.											
161												
162	**ProUCL computes and outputs H-statistic based UCLs for historical reasons only.**											
163	**H-statistic often results in unstable (both high and low) values of UCL95 as shown in examples in the Technical Guide.**											
164	**It is therefore recommended to avoid the use of H-statistic based 95% UCLs.**											
165	**Use of nonparametric methods are preferred to compute UCL95 for skewed data sets which do not follow a gamma distribution.**

153												
154					**Suggested UCL to Use**							
155					95% H-UCL	37.28						
156												
157					Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.							
158					Recommendations are based upon data size, data distribution, and skewness.							
159					These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).							
160					However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.							
161												
162					**ProUCL computes and outputs H-statistic based UCLs for historical reasons only.**							
163					**H-statistic often results in unstable (both high and low) values of UCL95 as shown in examples in the Technical Guide.**							
164					**It is therefore recommended to avoid the use of H-statistic based 95% UCLs.**							
165					**Use of nonparametric methods are preferred to compute UCL95 for skewed data sets which do not follow a gamma distribution.**

APPENDIX G LOTSEARCH REPORT

LOTSEARCH

LOTSEARCH ENVIRO PROFESSIONAL

Date: 04 Feb 2022 13:58:53

Reference: LS028902 EP

Address: Corner of Burwood Road & Parramatta Road, Burwood, NSW 2134

Disclaimer:
The purpose of this report is to provide an overview of some of the site history, environmental risk and planning information available, affecting an individual address or geographical area in which the property is located. It is not a substitute for an on-site inspection or review of other available reports and records. It is not intended to be, and should not be taken to be, a rating or assessment of the desirability or market value of the property or its features.
You should obtain independent advice before you make any decision based on the information within the report.
The detailed terms applicable to use of this report are set out at the end of this report.

Dataset Listing

Datasets contained within this report, detailing their source and data currency:

Dataset Name	Custodian	Supply Date	Currency Date	Update Frequency	Dataset Buffer (m)	No. Features On-site	No. Features within 100m	No. Features within Buffer

Contaminated Land

Corner of Burwood Road & Parramatta Road, Burwood, NSW 2134

Contaminated Land

Corner of Burwood Road & Parramatta Road, Burwood, NSW 2134

List of NSW contaminated sites notified to EPA

Records from the NSW EPA Contaminated Land list within the dataset buffer:

Map Id	Site	Address	Suburb	Activity	Management Class	Status	Location Confidence	Dist	Direction
207	Burwood STA Depot	Cnr Shaftesbury and Parramatta Roads	Burwood	Other Industry	Contamination formerly regulated under the CLM Act	Current EPA List	Premise Match	117m	South East
315	Caltex Service Station	89 Parramatta Road	Concord	Service Station	Regulation under CLM Act not required	Current EPA List	Premise Match	546m	West

The values within the EPA site management class in the table above, are given more detailed explanations in the table below:

EPA site management class	Explanation
Contamination being managed via the planning process (EP&A Act)	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation. The contamination of this site is managed by the consent authority under the Environmental Planning and Assessment Act 1979 (EP&A Act) planning approval process, with EPA involvement as necessary to ensure significant contamination is adequately addressed. The consent authority is typically a local council or the Department of Planning and Environment.
Contamination currently regulated under CLM Act	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation under the Contaminated Land Management Act 1997 (CLM Act). Management of the contamination is regulated by the EPA under the CLM Act. Regulatory notices are available on the EPA's Contaminated Land Public Record of Notices.
Contamination currently regulated under POEO Act	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation. Management of the contamination is regulated under the Protection of the Environment Operations Act 1997 (POEO Act). The EPA's regulatory actions under the POEO Act are available on the POEO public register.
Contamination formerly regulated under the CLM Act	The EPA has determined that the contamination is no longer significant enough to warrant regulation under the Contaminated Land Management Act 1997 (CLM Act). The contamination was addressed under the CLM Act.
Contamination formerly regulated under the POEO Act	The EPA has determined that the contamination is no longer significant enough to warrant regulation. The contamination was addressed under the Protection of the Environment Operations Act 1997 (POEO Act).
Contamination was addressed via the planning process (EP&A Act)	The EPA has determined that the contamination is no longer significant enough to warrant regulation. The contamination was addressed by the appropriate consent authority via the planning process under the Environmental Planning and Assessment Act 1979 (EP&A Act).
Ongoing maintenance required to manage residual contamination (CLM Act)	The EPA has determined that ongoing maintenance, under the Contaminated Land Management Act 1997 (CLM Act), is required to manage the residual contamination. Regulatory notices under the CLM Act are available on the EPA's Contaminated Land Public Record of Notices.
Regulation being finalised	The EPA has completed an assessment of the contamination and decided that the contamination is significant enough to warrant regulation under the Contaminated Land Management Act 1997. A regulatory approach is being finalised.
Regulation under the CLM Act not required	The EPA has completed an assessment of the contamination and decided that regulation under the Contaminated Land Management Act 1997 is not required.
Under assessment	The contamination is being assessed by the EPA to determine whether regulation is required. The EPA may require further information to complete the assessment. For example, the completion of management actions regulated under the planning process or Protection of the Environment Operations Act 1997. Alternatively, the EPA may require information via a notice issued under s77 of the Contaminated Land Management Act 1997 or issue a Preliminary Investigation Order.
